Landscape Architects

Phone 6636

Augusta, Georgia

LTHOUGH Landscape Gardening is one of the oldest of the arts, the work of the profession of Landscape Architecture, in its modern sense, is comparitively new. In spite of this fact, the value of the service now rendered by this profession is very generally understood, since the number of good examples of its work is rapidly increasing, and the appreciation of the artistic design, in these, by people of good taste, is steadily growing.

The Landscape Architect is one who "arranges land and the features on that land for the purpose of utility and beauty." In brief, his work is that of arranging elementary materials — trees, flowers, earth, rock and water, in a comprehensive plan, that embodies ideas, both practical and aesthetic. In arranging these materials, he is a designer, just as an Architect is a designer. He begins each problem by answering, first, the demands of utility, and works from these, to the final decoration or embellishment of all parts of the design. His work should begin before the buildings are definitely designed and located, as there are many considerations, in the choosing of the site, that do not properly enter into the Architect's field.

The P. J. Berckmans Company, Inc., respectfully offers its services, as Landscape Architects to all persons who are interested in the laying out of land for practical and aesthetic purposes. The men who have charge of this work have had the best of technical training in the Schools of Landscape Architecture in Harvard University and in the State College of Pennsylvania; and have traveled extensively in this country and abroad for the purpose of studying the best work in landscape design. Their knowledge of the flora, suitable for landscape work in this section of the country, is the result of the firm's fifty years of experience.

The practice of this office includes the making of reports, designs and specifications for the development of large country estates, the grounds of suburban or city homes (the small place often needs the more careful attention), formal and informal gardens, garden accessories, such as pergolas, fountains and garden houses; the grounds of country clubs, golf clubs, educational institutions and public buildings; parks and parkways, cemeteries, playgrounds, industrial villages and land sub-divisions. It is prepared, also, to give advice upon forest culture and problems in city planning.

Professional Methods—A visit to the property, and a consultation with the owner, is the first step. If buildings are to be erected, the owner, Architect and Landscape Architect should consult together, to determine the best site, and outline the general arrangement of the most important features. This saves expense, and gives the Landscape Architect an advantage in working out the design. A topographical survey is next prepared, and over this a preliminary plan is made, which outlines the general design in a tentative way. When this is approved, working drawings for grading, construction and planting are made. Planting is studied to bring out the general design, and to obtain harmonious groupings according to growth, texture and color. The adaptability of plants to soil and climatic conditions is carefully considered.

Charges—Charges are made on a per diem basis, for time spent in consultation, in the preparation of reports, plans and specifications, and in traveling, if the latter must be done during office hours. All traveling and living expense is rendered as an additional charge, but, when several clients are visited on one trip, this expense is proportioned among them.

A statement, giving more detailed information, will be forwarded on request.

Suggestions

Always address all communications to P. J. BERCKMANS COMPANY, Drawer 910, Augusta, Ga., and not to individuals.

NOTE All quotations are for immediate acceptance, subject to stock being sold. No liability to attach to us where frost, drought or other casualties beyond our control prevent delivery of stock that may be contracted for.

ORDER NOW.—Do not wait until you are ready to plant. Frequently orders sent late in the season cannot be filled in full. Send us your order now; it will be carefully filed until you desire it shipped. When making out your order, write the full and correct name of the article desired, as given in catalogue. Give size and catalogue price. Never give local names of plants, as different plants frequently have the same local names.

RESERVING ORDERS—When purchasers desire these to be reserved for weeks or months after the opening of the shipping season, they must be paid for in full at the time of ordering.

NAME AND ADDRESS—Always write your name plainly upon order sheet in catalogue. A lady should always sign herself Miss or Mrs., and always use the same initials.

Give your postoffice, county and state, also street or postoffice box number, and the name of your nearest express office.

SHIPPING DIRECTIONS—Give plain and explicit directions for shipping. If by freight, state route. When no directions are given, we shall use our best judgment in forwarding; but in all cases shipments are at purchaser's risk after receipt is taken from the transportation company. Freight and express rates will be given upon application.

EXPRESS.—In all cases, when possible, we advise our customers to have their goods forwarded by express. Plants, trees, etc., are taken at a special reduced rate.

PARCEL POST—Owing to the nature of our products, we can send very few plants by Parcel Post, but if order can be sent this way, sufficient amount to cover postage must accompany order; otherwise it will be sent by express.

PACKING—All articles in this catalogue packed free, except when for export, as such orders require large quantities of specially prepared packing material, and entail much extra labor and care in preparation. This extra packing is charged at actual cost. We maintain a large force of experienced packers, and only the most expert are entrusted with this work.

TERMS OF PAYMENT—Cash with order, or satisfactory reference before shipment; or, if preferred, will ship goods with Bill of Lading attached to Sight Draft, through express or bank. On all C. O. D. and Sight Draft orders we require 25 per cent of the bill remitted before shipment.

PRICES—All prices quoted are net. We offer no premiums, discounts, or gratuities. Five trees or plants of a class will be billed at the 10 rate; 40 trees at the 100 rate; 400 at the 1,000 rate, viz.: Five Pecans will be billed at the 10 rate; 40 at the 100 rate, etc.

REMITTANCES—Remittances should be made by Postoffice or Express Money Orders, or by checks on Augusta or New York. As our banks charge exchange on checks on all points except Augusta and New York please add one-fourth of 1 per cent on private checks. We cannot be held responsible for losses when remittances are not made as directed above. Cash sent through the mails is at sender's risk. Make all remittances payable to P. J. Berckmans Company.

WE GUARANTEE every tree or plant to be in a perfectly healthy condition, up to grade and first-class in every respect when leaving our hands, but, after delivering to forwarders, all losses resulting from delays or exposures in transit are at risk of purchaser.

RESPONSIBILITY—We have no connection whatever with any other nursery, and our responsibility extends only to persons purchasing direct from us. We are not responsible for failures arising from defective planting, unfaborable weather conditions, or improper treatment and cultivation.

If any Nursery stock, etc., proves untrue to description under which it is sold. Seller shall be liable to the Purchaser only and to no greater extent or amount than the purchase price of such Nursery stock, etc., and the Seller except for the aforesaid agreed liability and inrespect to such purchased Nursery stock, etc., gives no warranty express or implied as to description, quality, productiveness or any other matter.

P. J. BERCKMANS CO., INC.,

Augusta, Ga.

ERRORS-We exercise the utmost care in filling orders, and always put in more than is ordered, but during the rush of the busy season an error is occasionally made, and satisfactory correction will be promptly made upon notification. Keep a copy of your order for comparison. All claims for errors must be made within five days after cation. Keep a copy of your order for comparison. All receipt of goods; otherwise they will not be entertained.

SHIPPING FACILITIES—Augusta being the terminal point of seven lines of railroads, and two lines of steamers upon the Savannah River, enables us to secure low rates of freight to all points.

SHIPPING SEASON—This usually commences about the middle of October, or as soon as the plants are sufficiently dormant to lift with safety, and for all open ground trees and plants continues until the middle of March, or until the buds begin to swell. Pot-grown plants can be safely sent out any time of the year.

INSECTS AND DISEASES-Our Nurseries are free from disease. Certificate of State Entomologist is attached to every shipment.

FUMIGATION—We fumigate our stock with hydrocayanic acid gas before shipping, as required by state law, so that assurance of freedom from insects or diseases of any kind is made doubly sure.

Hints for Planters

Time for Planting—In this climate, vegetation, although inactive in winter for the formation of leaves and new wood, is never so as to new roots. A tree transplanted in the early winter will, by the ensuing spring, have grown sufficient new roots to give it a firm hold in the ground, and will grow off rapidly when active vegetation commences. Plant as early after the first killing frost as practicable, although hardy stock can be safely transplanted any time during the winter when the ground is not too wet or frozen. Planting can be continued until the middle of March, or until just before the buds begin to swell.

just before the buds begin to swell.

Preparation of the Soil-The most desirable soil for Preparation of the Soil—The most desirable soil for fruit trees is a rich loam, naturally dry or made so by drainage. Peaches and plums must be planted on high, well-drained soil. Before planting, prepare the land by thoroughly plowing and subsoiling, first using a two-horse plow, followed by a subsoil plow. Lay off the rows at required distances, and dig holes at least two feet wide and two feet deep; fill the holes by breaking in the sides, commencing at the bottom and going upward. Use surface soil in filling up, and with this mix one or two shovelfuls of thoroughly decomposed barnyard manure, or use one or two pounds of good bone meal. All fertilizers must be thoroughly of good bone meal. All fertilizers must be thoroughly incorporated with the soil. Avoid the contact of the roots with heating manures.

advocate digging holes with dynamite strongly

whenever feasible.

Preparation of Trees and How to Plant-Before planting, remove the broken roots; cut back one-year planting, remove the broken roots; cut back one-year peach, apple, pear, cherry and plum trees to a naked stem 1½ to 2½ feet high, leaving no side branches. Two-year-old trees should have their branches cut back to half their length or less; the lower limbs less than those above, cutting in shorter as you go upward, leaving the leader the longest. (For pruning peach trees, see page 12). The tree should be set about 2 inches deeper than it stood in the nursery.

Cultivation—You cannot expect to get good results from your trees unless you keep them well cultivated. The soil must be frequently stirred during summer. The area immediately around the trees must be kept free from grass and weeds, and this portion of the orchard

should receive especial attention. All suckers or branches which start below the head of the tree should be removed. For the first two years cultivate the or-chard during summer in some crop suited to the lo cation, such as cotton, vegetables, melons, peas, peanuts, velvet or soy beans, giving the preference to leguminous crops. Never plant corn or small grain in your orchard.

It is always advisable to sow in the fall a cover crop, such as clover, vetch or rye, using a suitable fertilizer. Turn under this cover crop in early spring. When soils are deficient in lime and potash, supply this deficiency with an application of lime, bone meal, hardwood ashes or high grade commercial fertilizer, as the soil requires. Satisfactory results cannot be expected unless the or-chard is supplied with the proper plant food and re-ceives careful cultivation.

Selection of Trees—For this climate, experience has taught us that one and two-year-old trees of thrifty growth (except peaches, only one-year trees of which should be planted) are the most desirable. Purchasers should bear in mind that such trees can be removed from the nursery with all their roots, whereas a fouror five-year-old tree cannot be taken up without cutting away a large portion of them. Success in transplanting is increased according as attention is paid in selecting well-rooted trees, instead of heavily-branched ones. well-rooted trees, instead of heavily-branched ones. Give as many sound roots and as little head to a tree as possible.

Care of the Trees on Arrival-If not ready to plant Care of the Trees on Arrival—11 not ready to plant on arrival, unpack without exposing the roots to cold or air; dig a trench, and heel-in by carefully covering the roots with earth, and give a copious watering. Trees thus treated can remain in the trenches until ready for planting in the orchard. If frozen when received, do not open the boxes, but place them in a cellar or some cool, dark room that is free from frost, and let them remain until all frost is drawn out. If no cellar or remain until all frost is drawn out. If no cellar or frost-proof room, bury the box in sawdust or dirt until thawed. The point is to get the frost entirely out without sudden exposure of stock to heat, light or air. Even if frozen solid, the stock will not be injured if handled in this manner.

Injurious Insects and Fungus Diseases

We only enumerate the most abundant and destructive insects and fungus diseases which infest our orchards and gardens. The remedies as suggested are in accordance with the latest recommendations of the

leading Entomologists.

leading Entomologists.

Previous to spraying during the dormant season all trees and plants should be properly pruned. The proper time for applying spray solutions cannot be given exactly in this calendar. Allowances for difference in climatic and weather conditions between different localities must be considered. The orchardist should familiarize himself with the habits and life history of the different insects and diseases, in order that he may apply to his particular locality and conditions the necessary measures essary measures.

APPLES.

Apple Worm (Coddling Moth)—Spray with two pounds of Standard Arsenate of Lead, three pounds of lime to each fifty gallons of water; first, so soon as the petals fall and before the calyx closes; second, two weeks later; third, about eight weeks after the petals fall.

When the time comes for using the third spraying. Bordeaux Mixture should be combined with one and one-half pounds of Arsenate of Lead. The Bordeaux Mixture (4-4-50) is used at this time to prevent Bitter

Rot and other fungus diseases.

Apple Tree Blight-Same treatment as recommended

Apple Tree Blight—Same treatment as recommended for Pear Blight.

Bitter Rot—Use Lime-Sulphur Solution one and one-fourth gallons, two pounds of Arsenate of Lead to each fifty gallons of water. Spray as soon as petals fall. Give a second application of this same mixture three or four weeks after petals fall; then about eight weeks after petals fall use Bordeaux Mixture (4-4-50) with the addition of two pounds Arsenate of Lead, and repeat this latter spraying every two weeks until four applications of same have been given.

Borer—Keep orchard free from litter and examine trees regularly for borers. Their presence will be indicated by sawdust at the entrance of their burrows. Remove, if near the surface, by means of a knife or wire. For those that have entered to a considerable depth inject, by means of a medicine dropper, a small quantity of carbon bi-sulphide in their excavation and seal securely with putty or wax.

Canker Worm-Encircle the tree with a canvas belt thoroughly coated with tar; also spray with arsenate of lead as soon as worms appear; two pounds of arsenate of lead, three pounds of lime to fifty gallons of water. If necessary repeat in three or four days.

Caterpillar—Destroy nests as soon as they appear in the spring by burning, or spraying with two pounds of arsenate of lead, three pounds of lime to fifty gallons of water.

Cedar Rust-Use seven pounds of atomic sulphur, two pounds of arsenate of lead to each fifty gallons of water. Spray the trees at the same period as recommended for Scab.

Green or Black Aphis—Spray with Black Leaf 40 at the rate of one part to 200 or 300 parts of water, as soon as the Aphis appear.

San Jose Scale—For dormant spraying, use Thomsen Chemical Company's lime-sulphur solution mixed at the rate of one gallon to eight gallons of water. Spray as early in the fall as trees are dormant, and again later in February or early March if the orchard is badly infested. For summer would suggest spraying with kero sens emulsion, one part of the emulsion to five parts of water,

Scab-Use one and one-fourth gallons of lime sulphur solution, two pounds of arsenate of lead to each fifty gallons of water. Spray first, just before buds open; second, repeat as soon as petals fall; third, three or four weeks after petals fall; fourth, eight weeks after

Woolly Aphis (Schizoneura lanigera)-for aboveground colonies, spray with Black Leaf 40, 1 part to 200 parts of water, or a tobacco decoction. The summer spray of 1½ gallons of lime-sulphur to 50 gallons of water will also kill them, but must be applied with

For root-inhabiting colonies, remove the soil to a depth of about three inches, or sufficient to partially expose the roots; open a circle from four to eight feet in diameter, depending on the spread of the roots; dis-tribute three to eight pounds of tobacco dust or use 10 per cent kerosene emulsion. Enough emulsion should 10 per be used to saturate the soil to a depth of three or four inches. Recent experiments have shown that kerosene emulsion may be used with success. Tobacco dust sene emulsion may be used with success. sene emulsion may be used with success. Tobacco dust is of more value as a preventive and fertilizer. Badly infested trees should be treated with kerosene emulsion, applying this in April or May, but be sure to have the stock solution properly made or it may injure the trees.

BLACKBERRIES.

Rust—Use a spray of sulphate of copper solution; one part to fifteen gallons of water before buds break. Use Bordeaux Mixture (4-6-50) if Rust appears in spring or summer.

GRAPES.

Black Rot-Use Bordeaux mixture (3-4-50). Spray first, when leaves have expanded; second, just fruit has set; repeat every two weeks until fruit is near-

Borer (Prionus)-Its presence is manifested by the unhealthy appearance of the vine. Sea made at the roots and the grub destroyed. Search must be

Curculio—Use Bordeaux Mixture (3.4-50) adding two pounds of arsenate of lead. Spray, first, before blooming; second, when fruit is about one-eighth inch in diameter; third, about first or fifteenth of July.

Flea Beetle—Use two pounds of arsenate of lead, three pounds of lime to fifty gallons of water. Spray as buds are swelling and a second time about two weeks later.

Leaf Folder (Desmia funeralis)—Kerosene emulsion or paris green or arsenate of lead as a spray.

Mildew-This can be controlled by Bordeaux Mixture same as recommended for Black Rot.

JAPAN PERSIMMONS, WALNUTS AND PECANS.

Borer (Prionus) - These bore through the roots and usually destroy the tree, and must be carefully removed. Carefully examine collar of tree in winter and mid-summer, and apply lime-sulphur wash.

Caterpillar (Catocala maetosa)—Feeds on the leaves of pecans, and is sometimes quite injurious. Spray with paris green four ounces, lime one pound, to fifty gallons of water.

Pecan Bud Worm (Proteopteryx deludana)recan but worm (rroteopteryx deducana)—spray the trees just as the buds are opening, with arsenate of lead, three pounds to fifty gallons of water, and two pounds of lime, and repeat application ten days later. If the worms appear again in June or July, repeat the treatment. This will also help control the pecan husk

Twig Girdlers (Oncideres cingulatus)—All limbs that have been girdled and have fallen must be burned at once, thus destroying all future broods of sawyers.

White Fly—One and one-half gallons of Schnarr's Insecticide to 100 gallons of water, or Whale-oil soap 1 to 1½ ounces to 1 gallon of water, or Thomsen Chemical Company's lime-sulphur solution, 1 part to 25 parts of water.

PEACHES AND PLUMS.

Peach Tree Borer (Sanninoidea exitiosa) -The old method of worming peach trees in winter has been found ineffective, principally because the worms cause too much damage before being removed.

In the spring remove the earth from about the body of the tree down to the crown, scraping off gummy ex udations, and carefully search for the borer. For thi For this work use a farrier's knife or a tool especially made for woming peach trees.

An excellent wash for borers is the following: One bushel of quicklime, 20 pounds of sulphur, 1 gallon of coal-tar, 50 gallons of water. Mix tar and sulphur in 10 gallons of water and add lime. Stir well while slaking. When it is entirely slaked dilute the above to 50 gallons, and apply this wash to the tree, allowing it to run well down upon the roots. As soon as it is applied, draw up the earth to the tree so that it will form a cone about six inches above the level. A second application of this wash should be made during August. During the last of October remove the mound of earth from around the tree and thoroughly scrape the bark, as in the spring, and give another application of the as in the spring, and give another application of the wash, when this is completed draw up the earth about the tree as above recommended. This is a vigorous treatment, but is effective in all cases. Black Knot in Plums—Cut off the affected branches below affected parts and burn to prevent its spreading.

An excellent wash for borers is the following:

Spray with bordeaux mixture.

Brown Rot on Peaches, Plums and Nectarines-As Brown Rot, Curculio and Scab work together, treatment is, therefore, recommended for all.

For Early and Mid-Season Varieties-First: Spray the trees about ten days after the petals fall, when the calyces or shucks are being pushed off, using 1½ pounds of tri-plumbic arsenate of lead and 3 pounds of lime to each 50 gallons of water. This is for the curculio and should be applied with a nozzle capable of throwing a fine spreading mist, covering the fruit and foliage with a very thin film of paison but under no given returned. a very thin film of poison, but under no circumstances should the trees be drenched.

Second: About twenty days later, or one month after the petals fall, spray the trees with atomic sulphur, 5 pounds to 50 gallons of water, or self-boiled lime-sul-phur (8-8-50). To this should be added 1½ pounds of tri-plumbic arsenate of lead, and where arsenate of lead is used, 3 pounds of lime to each 50 gallons of the spray. This is the second treatment for the curculio and the first treatment for scab and brown rot.

Third: About one month before the fruit is expected to ripen, spray the trees with atomic sulphur, 5 pounds to each 50 gallons of water, or with self-boiled lime-sulphur. No poison should be used at this time, and since the application is intended to prevent the development of brown rot during the month preceding the ripening of the fruit and during the picking season, the trees should be sprayed rather heavily so as to coat the fruit on all sides.

For Late Varieties-Late varieties should be sprayed with an additional application of atomic sulphur or self-boiled lime-sulphur about three weeks after the second treatment. This extra treatment is for the protection of the fruit from the attacks of peach scab, to which late maturing varieties are especially susceptible, as the interval between the second and third treatments would be much too long without it.

Curculio-To prevent the depradation of this pest see remedial measures under Brown Rot and Scab.

Peach and Plum Rosette-Root up and burn the affected tree as soon as the disease is observed.

San Jose Scale—Same treatment as recommended for

Apples.

PEARS.

Pear Blight-Cut off and burn all affected limbs. Careful pruning should be resorted to during the winter to remove all affected limbs and affected areas. Disinfect the pruning shears after removing each branch or affected part. About a 4 per cent solution of formalde-hyde can be used for this purpose.

Pear Blight is a bacterial disease and easily transmitted. Write to the State Board of Entomology, Atlanta, Ga., for bulletin on Pear Blight and Its Control; also to the Bureau of Plant Industry, Dept. of Agriculture, Washington, D. C.

San Jose Scale-Same treatment as recommended for Apples.

PECANS

See under head of Japanese Persimmons, Walnuts and

RASPBERRIES

Rust-Same treatment as recommended for Blackberries.

ROSES.

Anthracnose-Cut off anl burn diseased parts and spray with Bordeaux Mixture (4-6-50).

Aphis-Spray plants with a solution of sulpho-tobacco soap; or a 2 per cent solution of lime-sulphur; or to-

Black Spot—This is a fungus disease. All diseased leaves should be removed from the plant, and those on the ground raked up and burned. Spray the plants with same strength of Bordeaux as recommended for mildew.

Leaf Hopper-Spray with insect powder, tobacco decoction or kerosene emulsion.

Mildew-This is caused by extremes of heat and cold, or by a continuance of damp, cold weather. Sprinthe the plants with water, and dust them with soot, or spray with Bordeaux mixture, 3-9-50, taking care to reach the under side of the leaves as well as the upper; also spray the ground around the plants.

Slugs-Spray with hellebore or insect powder.

Thrips and Other Insects-Same treatment as for

SHADE TREES

Leaf Eating Insects—Spray with two pounds of arsenate of lead, three pounds of lime to each fifty gal-

San Jose Scale-Same treatment as recommended for Apples.

West India Scale-When trees are dormant use limesulphur solution as a spray, mixed one gallon to eight of water. During the growing season use Schnarr's Insecticide, mixed 1½ gallons to 100 gallons of water.

WALNUTS.

See under head of Japanese Persimmons, Walnuts and

Fungicide and Insecticide Solutions and Formulæ

Arsenate of Lead can be used as a substitute for paris green and london purple. It can be used much stronger with less danger of injury to plants. Two pounds to fifty gallons of water give good results against most biting insects. As a safeguard against injury to the follows add three pounds of lime. foliage, add three pounds of lime.

Atomic Sulphur (Thompsen's)—The best preventive against Brown Rot in Apples, Peaches, Plums and other fruits.

Bordeaux Mixture—Copper Sulphate, 4 pounds; quicklime, 6 pounds; water, 50 gallons. Dissolve the copper sulphate by putting it in a bag and hanging it in a wooden or earthen vessel holding 25 gallons; slake the lime gradually and add water until you have 25 gallons. The copper sulphate mixture and lime should then be poured into the pump so that the two streams will mix thoroughly as they fall. Bordeaux mixture will not keep more than twenty-four hours. Remember this.

Copper Sulphate Solution—Dissolve 1 pound of copper sulphate in 15 gallons of water. Do not apply this solution to foliage; it must be used before buds break on grape vines and peach trees. For the latter, use 25 gallons of water.

Kerosene Emulsion-One-half pound of soap dissolved Kerosene Emulsion—One-half pound of soap dissolved in I gallon of water; add to this, while hot. 2 gallons of kerosene. (The boiling soap solution should be removed from the fire before the kerosene is added.) Churn violently with a spray pump or garden syringe until the mass becomes of the consistency of butter. Dilute the above mixture with from 9 to 15 parts of water when using, so that it will not be stronger than 1 part of oil to 9 to 15 parts of water. Sour milk may be used instead of soap used instead of soap,

Larkin's Sulpho-Tobacco Soap is a universal insecticide. A safe and sure exterminator of all kinds of insects and vermin on plants, shrubbery, vines, small fruits and trees. The soap is non-poisonous and absolutely safe to handle. It will not injure the tenderstreams derest growth.

Lemon Oil—Plants should be dipped in a solution of suitable strength. While it kills all scale insects, it is not injurious to the most tender plants.

Lime-Sulphur Solution—Lime unslaked, 20 pounds; sulphur, ground, 16 pounds, water to make 50 gallons. Place 8 to 10 gallons of water in an iron kettle over a fire, and when it reaches the boiling point, add the sulphur and mix thoroughly; then add the lime, which will immediately produce a violent boiling. From time to immediately produce a violent boiling. From time to time add a small quantity of water as needed to prevent boiling over or burning. The sulphur gradually goes into solution, and the mixture, at first thick and pasty, becomes thinner and thinner, changing in color through several shades of yellow. After boiling at least one and a half hours, the mixture should be diluted to the proper amount by the addition of sufficient hot water. If a suitable boiler is not convenient, the mixture may be more economically cooked in barrels or tanks by the use of steam.

Thomsen Chemical Company's Lime-Sulphur Solution is recommended for the treatment of the San Jose scale, as the lime-sulphur treatment is superior in many ways to the other remedies. Write us for prices.

Naphtha Soap and Nicoticide—One ounce of soap and one-quarter ounce of Nicoticide to each gallon of water. It is advisable to have the water at 100 degrees Fahrenheit. This is an excellent spray for red spider.

Paris Green—Actively poisonous. Add 4 ounces of paris green, 1 pound of fresh lime, to 50 gallons of water. Paris green and bordeaux mixture may be applied together without the action of either being weakened.

Pyrethrum—One ounce of the "Bubach" powder added to 2 gallons of cold water, for any plant used for food, as this is non-poisonous.

Scalecide-One per cent solution of scalecide or 1 per cent prepared lime-sulphur solution will eradicate red spider.

Tobacco, 1 pound; boiling water, 2 gallons; strain when cool. It is very effective when used as a spray against flea beetles, aphides (plant lice).

White Hellebore, 1 ounce; water, 3 gallons. Effective as a spray for rose slugs.

SPRAYING.

We cannot be too emphatic in impressing on the hor-We cannot be too emphatic in impressing on the horticulturist to spray his fruit trees and grape vines if he desires good fruit. Follow directions carefully. Experiments frequently result disastrously. Careless spraying will result in loss of fruit and sometimes the trees. Every fruit grower should purchase a spraying apparatus; it can now be had for a small sum. Be careful in keeping your solution continually stirred. The best time for spraying is late in the afternoon or during cloudy weather, except with kerosene emulsion; this should be used on bright, shiny days. (We recommend the Gould Pumps. Write us for prices on these; we can save you money.) can save you money.)

Other scale insects, of which there are several species. such as cherry scale, pecan scale, obscure scale on shade trees, can be controlled during the winter months by the use of lime-sulphur or soluble oil, or during sum-mer months by spraying with kerosene emulsion or sulpho-tobacco soap.

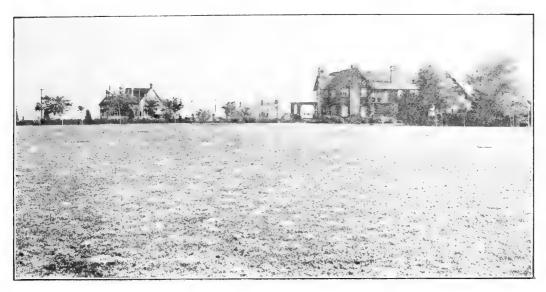

NOTE.—If your trees are infested with any insects or fungous diseases, send infested portion to your Experiment Station, your State Entomologist, or the United States Entomologist at Washington, D. C.

Special Southern Evergreen Lawn Grass, "Fruitland Mixture"

IF YOU WANT A BEAUTIFUL LAWN THIS WINTER, TRY OUR "FRUITLAND MIXTURE."

For a number of years we have tested many grasses to determine which ones would stand best in the South. We have finally succeeded in obtaining one, our "Fruitland Mixture." which has given most satisfactory results, and we have not yet seen a better lawn grass for this section than our mixture produces. It is composed only of such grasses as have exhibited the greatest heat and drought-resisting qualities. These grasses are most carefully blended, resulting in a mixture that stands our hot weather better than any evergreen lawn grass that we have been able to obtain. Of course, during periods of intense heat and drought, the "Fruitland Mixture," as well as all other evergreen lawn mixtures, will burn out more or less. During the hot, dry periods use a lawn sprinkler or hose and nozzle after sunset. Lawns are frequently injured by using the hose and putting on the water with too great force, especially when the sun is shining. All of our seed has been re-cleaned, is strictly free from weeds, and of high germination. During prolonged droughts it pays to water daily instead of only periodically. Grass, when artificially watered, requires that this ber repeated regularly.

HOW TO MAKE A LAWN. The ground must be first thoroughly prepared by being plowed as deep as possible, and then sub-soiled; harrowed, and all stones removed. If the area cannot be plowed; then spade it up carefully and thoroughly. Apply a liberal amount of thoroughly rotted stable manure, turn this under and harrow. If this is not available then use sterilized sheep manure at the rate of 1000 pounds to the acre, or 500 to 800 pounds of bonemeat; rake in well and level off the ground. When the surface has been raked perfectly smooth, the seed should be sown broadcast at the rate of 60 to 75 pounds to the acre (a space 210 x 210 feet). Rake lightly, thoroughly covering the seed, then roll. If the space is too small for rolling, or if you do not possess or cannot procure a roller firm the soil with a plank. When the weather is very hot and dry, do n

Spray Pumps

We can ship promptly from Augusta the following Gould's Spray Pumps: "Bordeaux" No. 1129, "Pomona" No. 1100, also hose, nozzles, couplings and bands.

The "Pomona" pump is the most dura-

The "Pomona" pump is the most durable barrel sprayer. It is very powerful and will supply 2 leads of hose and 4 nozzles. The "Bordeaux" is placed in bucket, with foot-hold on outside. This is the best small pump made. The "Monarch" is the best high-grade sprayer for large orchards. We recommend the pumps made by the Gould Manufacturing Company. Write us for descriptive catalogues and special prices.

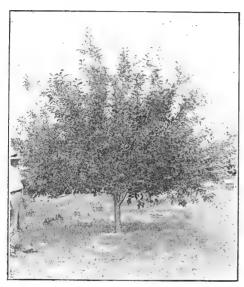

Bordeaux Pump No. 1129.

Fruit Department

Apples

Winter Queen Apple.

Summer Apples

Varieties for Market Orchards in Capitals.

COFFMAN. SUMMER RED; COFFMAN JUNE. Medium large, roundish oblong; greenish yellow, striped and splashed with red, with white dots; flesh white, juicy, of good quality. An improvement on Red June. The tree is an upright grower. Last of June.

*CAROLINA WATSON. Very large oblate-conical; green, striped with dull red, with a dull red cheek; sweet, crisp and very fragrant. Exceedingly prolific, and a good market fruit. Beginning of July.

EARLY HARVEST. EARLY JUNE-EATING; YELLOW HARVEST. Medium to large; bright yellow; tender, juicy, well flavored. An excellent home-market apple; invaluable in any orchard. June 5, and lasts two or three weeks

HORSE, HAAS; SUMMER HORSE; YELLOW, RED or GREEN HORSE, etc. Large; green; acid. Good for cooking and drying. Known everywhere. A very productive variety. July and August.

Hominy, Sops of Wine. Medium; red; very juicy; subacid. July.

MARGARET, EARLY RED MARGARET; SOUTHERN STRIPED JUNE. Small to medium; rather flat: skin yellow, with dark red stripes; subacid and of high flavor. Ripens June 20; lasts until July 20.

May Pippin, WHITE JUNE EATING. Small, yellow; good quality: last of May.

RED ASTRACHAN, Red Ashmore; Early Rus, etc. Large; yellow, nearly covered with crimson, and fine bloom; juicy, crisp, acid; a beautiful fruit. Tree a thrifty and fine grower; excellent and profitable. Ripens end of May and continues through June.

RED JUNE, Carolina Red June, etc. Medium conical; deep red; juicy. Very productive. June 15 to end of July. Varieties of European or northern origin, that mature their fruit in summer or fall, often prove as satisfactory and profitable in the South as those which have originated here; but the kinds that are most dependable for fall and winter use in that part of the southern states south of the Piedmont region are mainly seedlings that have been introduced by southern nurserymen.

Northern winter varieties seldom hold their fruit after the month of August in the section of the country above referred to; but many of these northern varieties are grown most successfully in the Piedmont section, as also are many of the varieties native to the South.

Clay or clay loam is the best soil for growing Apples. The land should be plowed well and deep before setting the trees. It should, of course, be well drained and kept thoroughly cultivated. Too much emphasis cannot be put on the importance of drainage; recent investigation has shown that a surplus of water in the orchard produces fruit of an inferior quality and flavor. The expense of tiling or ditching is not to be compared with the profits that are derived from an orchard that is properly drained and cultivated.

All of our Apples are budded or grafted on whole seedling stocks. We do not use pieces of roots for our propagation. Our Apples are unusually thrifty and vigorous.

Plant Apple trees 25 to 40 feet apart, each way, according to soil.

RED SIMMONS. Large; orange, nearly covered with red; flesh yellow; sugary; good flavor; quality very good. Ripens June to September.

YELLOW TRANSPARENT. WHITE TRANSPARENT, GRAND SULTAN, etc. Medium; yellow; good quality. A productive, excellent and popular variety. Tree of dwarfish habit. Bears young. June.

Autumn Apples

Varities for Market Orchards in Capitals.

Bietigheimer, Red Bietigheimer. Large to very large; roundish; ground color pale cream nearly covered with purplish crimson; flesh white, firm, subacid; an early and heavy bearer. Ripens in September.

BONUM, MAGNUM BONUM. Medium; deep crimson; firm, tender, juicy, mild, subacid. September to October

CAROLINA GREENING, SOUTHERN GREENING; YELLOW or GREEN CRANK; SOUTHERN GOLDEN PIPPIN GREEN CHEESE. Medium; green or yellow; crisp; subacid; fine flavor. Compact grower and prolific. September.

FALL PIPPIN. HUBBARDSON'S NONSUCH; POUND PIP-PIN; YORK PIPPIN, etc. Very large, bright yellow; flesh tender, juicy, subacid; quality best; valuable for market or table. September to October.

HARGROVE, Originated in Haywood County, North Carolina. Above medium to large; oblate; golden yellow with a bright carmine cheek; flesh, crisp, white; excellent flavor; subacid; quality best; an excellent market sort. October to November.

MRS. BRYAN. Origin. Walker County, Georgia. Very large; orange-red; quality best. Maturity, September and October. An exceedingly handsome fruit, and becoming very popular in many sections.

AUTUMN APPLES—Continued.

PINE STUMP. Large; oblate; dark crimson; flesh yellow, crisp, sugary; good flavor. August and September. A very showy fruit. Tree spreading, vigorous and productive. One of the best varieties for the Piedmont section of Georgia, South Carolina and North Carolina

North Carolina.

WALLACE HOWARD. Very large; conical; deep orange-red, with a few crimson stripes; flesh brittle, sugary and highly flavored; quality best. A very showy fruit. October.

Varieties for Market Orchards in Capitals.

BLACK ARKANSAS. Large; dark red; flesh yellow; very good; subacid; good keeper; late.

BLACK WARRIOR. Above medium; green; quality best; fine keeper and first-class in every respect: prolific. October.

BEN DAVIS, NEW YORK PIPPIN; THORNTON OF SOUTH-ERN ALABAMA. Medium; oblate; greenish yellow, with a crimson cheek; subacid; fair quality. Keeps well.

Bismarck, PRINCE BISMARCK. From New Zealand; has been fully tested in Europe and United States. Engr.

ismarcs, france dismarch. From New Zealand; has been fully tested in Europe and United States. Enormously productive; bears very young; quality good. Late fall and winter. Tree dwarf; is largely grown in pots for decorative purposes.

ELICIOUS. A remarkably popular variety in the West. Fruit large, nearly covered with dull dark red; fine grained, crisp, juicy; quality best; a splendid beauty and control of the control DELICIOUS.

red; fine grained, crisp, juicy; quanty vest, a spica-did keeper and shipper; vigorous grower.

FORT, FORT'S PRIZE. Medium size; deep crimson with pure white dots, and fine russet deepening towards apex and cavity; flesh white, crimson; good flavor; an excellent keeper; an attractive and reliable mar-

an excellent keeper; an attractive and reliable market sort; bears early; a vigorous grower; originated in Habersham County, Georgia, by Col. J. P. Fort. GANO. Black Ben Davis; Red Ben Davis; Peytons. Roundish; oblate; large; color deep, dark red; flesh yellowish white; mild; subacid. Quality good, and a profitable market variety.

Haywood. A seedling of Hoover; yellow and dark crimson cheek; flesh white; subacid; good quality. Maturity, October. Compact growth.

Horn, North Carolina Vandevere. Medium; flat or conical; here and farther south, dark crimson; farther north, green, with red cheek; juicy; rich. Ripens in November and keeps until March; tree an open grower; productive. grower; productive.

A native of Richmond County, Georgia.

Fruit lemon yellow with bright carmine cheek; very showy; excellent for preserving; a very reliable and prolific variety; a fine keeper.

Mangum, CARTER; GULLY. Medium; red striped; flesh firm; juicy and well flavored. Ripens in October, and keeps well; productive; vigorous, compact

PARAGON, MAMMOTH BLACK TWIG. A Tennessee seedling with the combining good qualities of Winesap and Limbertwig; fruit very large, yellow striped red,

and Limbertwig; fruit very large, yellow striped red, subacid; medium to late.

Romanite, Broad River, Southern Romanite, Round Gilpin, Conical; small; yellow and red with blush cheek; flesh, juicy, yellow, sub-acid; very good; very late; an excellent keeper; prolific.

ROME BEAUTY, ROYAL RED, PHOENIX, etc. Large; yellow and bright red; medium quality; moderate grower; a good bearer; an excellent market sort. Ripens in October. Keeps well.

ROYAL LIMBERTWIG. Large; oblate; pale yellow; striped red; flesh yellow, rich and juicy; productive. Ripens in October, and will keep until the following summer. Cannot be classed as of first quality, but is yet the most popular winter variety we cultivate. Profitable market variety.

SHOCKLEY, WADDELL, HALL, SWEET ROMANITE, Medium; conical; always regular; yellow, with a bright crimson cheek; flesh firm; sweet or subacid, with crimson cneek; nesh nrm; sweet or subacid, with some flavor; trees very erect, vigorous, exceedingly productive ripens in October and will keep until the following summer. Cannot be classed as of first quality, but is yet the most popular winter variety we cultivate. Profitable market variety for the South South.

South.

STAYMAN WINESAP, STAYMAN. A seedling of Winesap. Dark red; flesh firm, fine grained, crisp, subacid; quality best. Strong grower.

STEPHENSON, STEVENSON'S WINTER, STEVENS' WINTER, etc. Medium to large; green, covered with brown; flesh firm, juicy and spicy. A regular bearer, and keeps until April. The tree is a fine grower.

TERRY, TERRY'S WINTER. Originated in Georgia; medium size; subacid; red; best quality. An excellent market variety. Most prolific. November 1st.

WINESAP, HOLLAND'S RED, WINTER WINESAP, etc. Small to medium; red; vinous; quality very good. A good keeping apple.

good keeping apple.

good keeping apple.

WINTER QUEEN, POORHOUSE, WINTER GREEN. Large, roundish; oblate; pale yellowish green; russet spots; flesh yellowish moderately juicy; mild; subacid; very good. Tree vigorous, compact grower. This is a valuable addition to our varieties, as it is an exceptionally good shipper and keeper. Ripens last of October.

YATES, RED WARRIOR. Small, dark red, dotted with small white dots; flesh yellow, firm, juicy and very aromatic. Very heavy bearer and good keeper.

YORK IMPERIAL, JOHNSON'S FINE WINTER, SHEPP, etc. Medium; whitish, shaded crimson; flesh yellow, the profitable and the profitable

crisp, juicy and subacid; very good. A profitable market variety for the upper sections. October.

NOTE .- Nearly all winter Apples commence to be in eating condition here in October, and if properly taken care of in a cool, dry room, free from frost, the larger number can be kept through the winter.

Apricots

Apricots give the best results when planted in a situation where they are protected from the north and west by buildings or trees. The Apricot is one of the most delicious fruits grown; therefore a little extra care should be given in protecting the blooms from late spring frosts. A smudging on nights when frosts impend will save the fruit. As the Apricot is particularly susceptible to the attack of curculio, the fruit should be sprayed the same as peaches. The trees must be planted in high, well-drained ground, and must have clean cultivation. The period of maturity extends from the beginning of June to the end of July.

PRICES OF TREES: \$4.00 4 to 5 feet, branched35

AMBROSE. Large, rounded, early; skin deep yellow; flesh sugary and juicy; quality best. Middle June.

EARLY GOLDEN, DuBois. Fruit small, rounded; oval; skin smooth, pale orange; moderately juicy and sweet; very good flavor. Early June.

MOORPARK, DUNMORE; TEMPLE'S; DENANCY, etc. Fruit large; skin orange; brownish red on sunny

side; flesh bright orange; freestone; fuicy; rich and luscious flavor. Very productive; an unusually hardy variety, having produced fine crops as far north as Idaho. Late June.

Idaho. Late June.

ROMAN, TRANSPARENT; GROSSE GERMINE, etc. medium-sized; skin pale yellow, sometimes dotted with a few red spots; flesh dull yellow, soft, rather dry; one of the largest growing and hardiest Apricot trees.

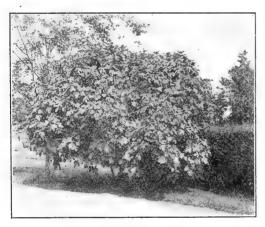

Figs

This fruit adapts itself to a wide range of soils and climates. By protecting the plants during winter some varieties have been successfully grown in the state of New York.

The canning of Figs for commercial purposes is gradually extending throughout the South. The supply of preserved and canned Figs is never equal to the demand. In some sections fresh Figs are also being successfully shipped to markets a distance of four or five hundred miles. The fruit must be carefully handled, and it should be packed in strawberry baskets.

The trees should be planted 12 to 18 feet apart, according to character of soil, and they should be trimmed so as to admit plenty of light and air into the center of the tree. Figs bear early, and the ripening period covers the season from June until November.

P

Celeste Fig.

RICES	OF	TREES.:	Each	10

100

BLACK ISCHIA, BLUE ISCHIA, etc. Fruit is of medium size; skin blue-black, with crimson pulp and of good quality; tree moderate bearer. Not so hardy as Green Ischia.

BROWN TURKEY. Medium; brown; sweet and excellent; very prolific. Most reliable for field-culture. One of our hardiest varieties.

BRUNSWICK, MADONNA; BROUGHTON, etc. Very large; violet; pulp thick; quality good; productive and hardy.

CELESTE, SUGAR; CELESTIAL, etc. Medium; pale violet, with bloom; sweet and excellent; prolific; early. Hardiest of all figs.

Green Ischia. White Ischia. Medium to large, green, crimson pulp; excellent, prolific. Produces fruit from middle of July until frost.

LEMON. Fruit medium to large, flattened, slightly ribbed, yellow, flesh white, sweet; early. Strong grower and very prolific. A favorite for canning.

Nectarines

Require the same culture as the peach. They ripen through July and part of August.

Varieties for Commercial Orchards in Capitals. Dates of maturity given for latitude of Augusta, Ga., except when noted.

A well-drained, sandy loam with a clay subsoil is an ideal soil for the Peach. But the Peach has the faculty of adapting itself to almost any soil, provided it is well drained. Peaches, if planted in sour land, will probably die before reaching the bearing stage. All Peach lands should be tested for an excess of acidity, and if such acidity exists, the soil should be corrected by an application of lime. Always plant a 1-year tree. Cut the tree back to 18 inches and plant 18x18 or 20x20 feet. It is best to have a low-headed tree. In the spring, after the growth has started, remove all but three branches, and let these be distributed so that the tree will be well balanced. For the first two years fertilize with well-rotted stable manure, or a mixture of one part of cotton seed meal or bone meal to two parts of 16 per cent acid phosphate by weight. Apply 1½ to 2 pounds of this mixture to each tree. After the third year, avoid nitrogenous fertilizers, and use a fertilizer containing a good percentage of bone phosphate and potash and a small percentage of nitrogen.

A Partial View of Berckmans Brothers' Orchard, Mayfield Ga.; Properly Pruned One-Year Peaches in Foreground.

Prune every year by cutting off one-third of the previous year's growth. The head of the tree should be broad and open, so as to allow free circulation of light and air. Never plant newly cleared woodlands; such lands should be cultivated for at least two years before setting the trees; otherwise wood-lice will injure them.

In preparing orchard land, plow as deeply as possible and then subsoil. Dig holes two feet square; better yet, use dynamite for making the holes. Cowpeas, soy beans or velvet beans are excellent crops for planting between the trees; it is best to drill in two feet apart, leaving four or more feet on each side of the trees, so as to have ample room for cultivation. Cultivate frequently, and in the late fall or early winter turn under the cover-crop. When the orchard begins to bear, it should have clean cultivation, but as soon as the fruit is harvested, drill in peas for cover-crop, and turn this under as above directed.

In fall it is always advisable to sow a cover crop, such as Clover, Vetch or Rye. This cover crop should be turned under in early spring.

Peaches, Freestone

Alexander. Above medium; highly colored in clay soils; less so in light soils; flesh greenish white; very juicy, vinous and of good quality; adheres to the stone. Matures from last of May to June 10. Remarkably prolific and bears very young. In many sections the fruit has proved to be a profitable variety for home use and market.

Angel. For Florida and sub-tropical sections only.
Large; roundish; slightly pointed; skin yellow, highly
washed with red; flesh white, juicy, fine flavor;
seedling of Peen-to; ripens in North Florida June 20.

ARP. ARP BEAUTY. Yellow mottled crimson; very good; semi-cling; desirable variety; ripens June 10th.

BELLE, Belle of Georgia. Very large; skin white, with red cheek; flesh white, firm, and of excellent flavor; very prolific; excellent shipper. Tree a rapid grower. July 5 to 20.

BRACKETT. (Named by us in honor of Col. G. B. Brackett, Pomologist, U. S. Department of Agriculture. Washington, D. C.) After experimenting with the best named varieties, we have finally succeeeded in securing in the Brackett a Peach which fills a long-felt want. Before disseminating this valuable Peach, we gave it a thorough trial for several years, and it has come up to our most sanguine expectations. Its period of ripening commences just at the close of the Elberta season. The fruit is a perfect freestone; large to very large, oblong, with sharp apex and shallow suture; color orange-yellow, washed red and mottled deep carmine, with a very dark carmine cheek; flesh deep yellow, juicy, highly flavored and of the best quality. This Peach is evidently a cross between Smock and Chinese Cling. It stands shipping well and promises to be a most popular variety. Ripens August 1st to 15th.

BERENICE. Originated by the late Dr. L. E. Berckmans in 1877. Large to very large; yellow mottled with dark crimson; flesh yellow, melting, juicy, rich. A popular shipping variety in sections where it is known. Matures from end of July to middle of August.

CARMAN. Large; creamy white, with deep blush; skin tough, but flesh very tender and of fine flavor; prolific bearer. A most profitable and popular shipping variety. Ripens June 20 to July 1.

Chairs. Large yellow; flesh very fine, heavy bearer; an excellent variety; matures August 15th to 30th.

CHAMPION. Large; skin creamy white, with red cheek; flesh rich and juicy. Ripens middle to last of July.

Columbia. PACE; YELLOW INDIAN; TINLEY, etc. Large; dingy yellow and red stripes; flesh yellow, buttery, rich and sweet; quality best. End of July to middle of August.

Dr. Berckmans. Large, creamy-white, blush cheek: flesh white, melting, vinous, of the highest flavor; a seedling of Chinese Cling, but surpasses any variety of the same parentage, maturing at the same season. Matures middle to end of July.

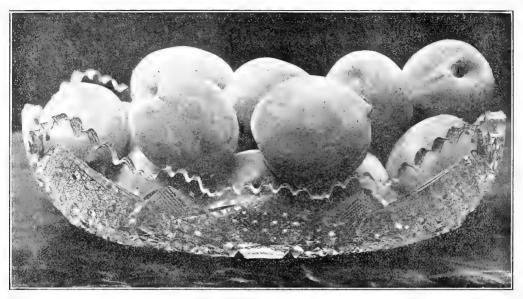

EDE, CAPT. EDE. Large, yellow; excellent quality; resembles Elberta but better flavor; ripens early in July.

ELBERTA, Large; yellow, with red cheek; juicy and of good flavor; flesh yellow. Ripe middle of July. This is an excellent shipping variety.

Emma. Large, yellow with red cheek: flesh yellow, firm, juicy; best quality; ripens from July 25th to August 5th, follows Elberta.

P.J.BERCKMANS

Brackett Peach.

Everbearing. Indian type. In some sections this Peach begins to ripen about July 1 to 15, and continues to produce successive crops until about the middle of September. Fruit varies in size from large to medium; is creamy white, mottled and striped with light purple and pink veins; oblong, tapering to the apex; flesh white, with red veins near the skin. Very juicy and of excellent flavor. Not recommended for commercial orchards, but for family use only.

Florida Gem. For Florida and sub-tropical sections only. A seedling of Honey, of large size; highly colored; roundish, oblong, pointed; sweet and juicy; red at the pit. Ripens July 1 to 10 in North Florida.

Fox. Large; white, with red cheek; of good quality and flavor; regular bearer. A good peach. Middle of September.

Francis. Fruit medium large; almost red, with yellow cheek; yellow flesh; quality very good. stone. July 20 to August 1.

GREENSBORO. Round, sometimes elongated; flesh

GREENSBORO. Round, sometimes elongated; flesh white; very juicy, of good quality; skin white with red cheek; highly colored in the sun; a good early market sort. Matures May last to June 15th.

HILEY, EARLY BELLE. Large; white, with beautiful red cheek; flesh white; quality best. Prolific bearer. Ripens June 25 to July 5. The best shipping variety of its season, which makes it very valuable.

Honey. Medium; oblong, with sharp recurved point, creamy-white, washed a mottled carmine; of honey sweetness; ripens June 15th to July 1st.

sweetness; ripens June 15th to July 1st.

MAYFLOWEE, Neva-Myss, Early Wonder. Originated in North Carolina. An excellent variety.

Fruit small to medium; round; entirely covered with red. Blooms late, very hardy; bears early, and, so far, ripens ahead of any other variety. May 15th to June 1st. Especially desirable in extreme southern parts of Georgia and the Coastal Belt. This Peach is an aquisition. Peach is an aquisition.

Pallas. A seedling of Honey. Originated by the late Dr. L. E. Berckmans; resembles the parent but is much larger and more nearly round in shape; flesh white, melting and vinous; ripens July 10.

Peen-to Free. For Florida and sub-tropical sections only. Fruit 2 to 2½ inches in diameter; very flat; Skin pale greenish white, with beautifully mottled red cheek; flesh finely grained; quality good. Ripens in Florida from April 1 to May 10.

Picquet. Very large; yellow, with a red cheek; flesh yellow, buttery, rich sweet and of the highest flavor. Maturity from end of August to middle of Septem-

Robert. Originated by the late Dr. L. E. Berckmans. Large, creamy-white, with crimson cheek and a few crimson stripes, flesh white, slightly veined pink; melting, juicy and vinous; quality best; a desirable bearer; ripens August 15.

SALWAY. Large; dull yellow, mottled brownish red; flesh yellow, firm, but rather acid; fine flavor. August 15.

Skinner. Skinner's Choice. Originated at Augusta; medium to large; yellow almost entirely covered with red; flesh yellow, of fine flavor; reliable bearer;

appey. Medium to large, clear, golden-yellow with dark cheek; flesh yellow, of fine quality; ripens July 5 to 10. Slappey.

YEED. BOWERS, PEEBLES. Medium; creamy white with carmine mottling; flesh greenish white; juicy; semi-cling; quality fair. Ripens May 20th to June SNEED. BOWERS, PEEBLES. 1st.

Summerour. ATLANTA. Very large; rounded, deep yellow; flesh yellow, juicy, sweet and of good quality; ripens from middle to end of September. This peach fills a gap which has long been open in season of maturity; because it ripens after all good free stones are gone.

HURBER. Medium to large; skin white, with light crimson mottling; flesh very juicy, vinous, of exceedingly fine texture. Maturity July 1 to 10. A seeding of Chinese Cling. This variety seldom fails to yield a crop of fruit when other varieties fail, and is highly prized as a market sort in some sections. THURBER. tions.

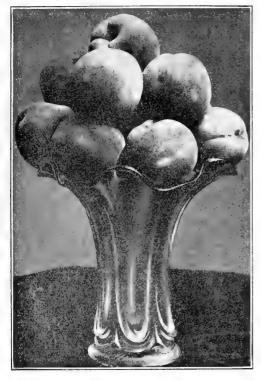

Tornado. Fruit medium to large; skin reddish yellow; ellow; good quality. Tree vigorous grower. flesh yellow; good quality. Freestone. Ripens July 20.

VICTOR. Size below medium; creamy white mottled with carmine, some faint dark stripes; flesh white, juicy, vinous, semi-cling; quality good. May 20th to June 10th.

WADDELL. Of medium size; fine shape; skin greenish white; almost covered with red; flesh white and juicy; very prolific. A fine market sort. Ripens June 20th to July 1st.

Kent Peach.

aldo. For Florida and sub-tropical sections only. Medium, roundish, oblong, bright yellowish-red; washed with carmine; flesh fine-grained, juicy and Waldo. melting; ripens June 1.

WALLER, Originated by Waller Brothers, near Sparta, Georgia. Matures one week later than Elberta. Evidently of Crawford type. Large, but not quite averaging the size of Elberta; a very heavy and reliable bearer; skin yellow, but more than half covered with red; stringy, but of good quality.

Tonderful. Very large; deep yellow, with carmine blush; flesh yellow, firm, good. Ripens middle to last of August. Wonderful.

Peaches, Clingstone

Albright. Large white, changing to light-orange; juicy, sweet, very good; ripens middle of October.

CARSON. Originated in Hancock County, Ga. to large, with pale yellowish ground completely over-spread with light crimson, with deep carmine cheek; flesh white, very juicy, vinous, red near the stone. A sure and heavy bearer; a most desirable variety; ripens last of July.

emming. Large; oblong, with a protuberance; yellow, with red cheek; flesh yellow; red near the stone; juicy, vinous and good. Resembles Pineapple, but Demming one month later.

Early Bidwell. For Florida and sub-tropical sections only. A seedling of Peen-to; creamy white with pale pink cheek; flesh very fine grained, buttery, melting and juicy; semi-cling; size medium to large; ripens in north Florida early in May.

Eaton. Medium; skin yellow, with occasionally a few pink spots; flesh yellow, sweet, juicy, apricot flavor. Superior for canning. Middle of September.

GENERAL LEE. IMPROVED CHINESE CLING. Above medium; oblong; creamy white, with carmine wash; flesh very fine-grained; melting, very juicy, and of high flavor; quality best. July 1 to 10. juicy, and of

Hancock. Originated by Berckmans Brothers, Mayfield, Georgia. Very large; skin orange-yellow slightly mottled carmine; flesh fine-grained; flavor sweet; a vigorous grower and a reliable bearer; ripens August 10 to 15. eath Late White English; Eliza Thomas;

August 10 to 15.

Heath Late White. White English; Eliza Thomas;
Potters September; Rauv; White Globe; HenriETTA, etc. Large; oval, with sharp apex; skin creamy white; very seldom with any red; flesh pure white to the stone; juicy and sweet, with good aroma. Very popular for preserving. Ripens beginning of September.

Indian Blood. dian Blood. Large; dark claret, with deep red veins; downy; flesh deep red; very juicy. Middle of August.

Juno. Originated by Dr. L. E. Berckmans; very large, deep yellow, mottled with orange-crimson; flesh yellow, fine-grained, very juicy, vinous, subacid; quality best; ripens August 10 to 20.

Originated at Augusta, Georgia, and first disseminated by us; has been tested in many parts disseminated by us; has been tested in many parts of the South, and in every one of these sections it has succeeded admirably; fruit large, slightly depressed at apex; skin greenish-yellow tinted carmine at apex and on cheek; flesh yellow, buttery and of exquisite flavor; skin very tough but peels very readily; an excellent shipper and we are sure will become one of the standard varieties for shipping. We recommend this variety unhesitatingly; ripens August 1 to 15 August 1 to 15.

Levy. HENRIETTA CLING. Fine cling; large size; skin deep yellow, shaded brownish red in the sun; flesh firm and juicy. Favorite variety in California.

Mealing, Originated by Dr. W. E. Mealing, North Augusta, South Carolina. Medium size; skin yellow, crimson on sunny side shading to deep orange; flesh firm, good quality; ripens last of August to middle of September.

riole. Originated by Dr. L. E. Berckmans. Large, yellow, rich, buttery. A yellow-fleshed Chinese cling; ripens August 15.

Pendleton. Very large; yellow; very good quality. Beginning of September.

Pineapple. Kennedy's Carolina; Allison; Largest LEMON, etc. Large; oblong, with a protuberance like a lemon; skin golden yellow, tinged with dark red; flesh yellow; slightly red at the stone; juicy; subacid; of excellent quality. Middle of August.

Stonewall Jackson. Almost identical with General Lee in size and quality, but ripens a week later; tree a more compact grower. July 10 to 20.

STINSON. Large; white, with red cheek; of very good flavor. The most profitable late Peach yet introduced for southern markets. Middle of October.

10

Pears

As a rule, Pears are most successfully grown in a very heavy, clay, or clayey loam, that has been well fertilized. If grown in sandy soil, coarse manure or litter should be worked into the soil. Mulching is of great benefit, and the orchard should be kept cultivated at all times.

This list of select varieties has been reduced to such as have been thoroughly tested and have proven valuable throughout the largest sections of the South. We grow Standard Pears principally, but can furnish Dwarf trees of a few varieties,

PRICES OF TREES: \$25.00 17.50

Distance for planting: Standard trees 20 to 25 feet; Dwarf trees 15 to 20 feet apart each way.

Oriental Pears

This type is peculiarly adapted to the South.

Garber. Resembles the Kieffer in size, appearance and quality, but matures here in August, and between the Le Conte and Kieffer. A thrifty grower and valuable

olden Russet. Japan Golden Russet. Large; almost globular; entirely covered with russet; firm, juicy; excellent for canning and preserving. A strong, vig-Golden Russet. orous grower.

arwaii or Sandwich Island. Medium; round, berga-motte-shaped, very prolific, foliage luxuriant; fine grower, very ornamental; valuable for cooking and

canning. October to December. ieffer. Fruit large to very large; skin yellow, with a light vermillion cheek; flesh brittle; very juicy, a light vermillion cheek; flesh brittle; very juicy, with a marked musky aroma; quality good. Matures from September to October. Tree vigorous and very prolific. Begins to bear when four years old.

very profile. Begins to bear when four years old.

Le Conte. CHINESE PEAR. Fruit large; pyriform; skin smooth; pale yellow; quality very variable; usually of second quality, but if allowed to mature slowly in a cool, dark room, its quality improves remarkably. Maturity from July 20 to end of August. Trees begin to bear when five years old.

Mikado. Large, yellow; flesh brittle; vigorous grower; good for cooking and preserving. Last of August.

Magnolia. Large, brownish-red; quality fair; matures later and keeps better than Kieffer. A desirable variety.

Smith. Almost identical with Le Conte in size, shape and quality, but a few days earlier.

European Pears.

SUMMER.

lamo. Origin, Texas. Large; yellow, with bronze cheek. Tree a vigorous grower; bears young.

Bartlett. Large; buttery, melting, of rich flavor. Very popular. Ripens end of July and during August.

Archangel. St. Michael Archangel. Large; melting;

very good; juicy; tree pyramidal; ripens in August. Clapp Favorite. Resembles Bartlett, but ripens a few days earlier. Fine flavor. Tree a vigorous grower.

days earned.

Early Harvest, Good size and productive. Ripens in July.

Large; me Good size and color; quality fair; very

Large; melting; sweet; handsome.

August. August. Iffard. Medium size; juicy. Tree a straggling grow-er. Ripens middle of June.

oonce. Medium to large; very handsome; juicy; sweet; very good. Tree a vigorous grower. Middle Koonce. of June.

Lucrative. norative. Belle Seigneur d'Esperen; Fondante d'Automne. Large; melting; delicious; fine grower; bears abundantly and regularly. End of July and August.

Marguerite. Petite Marguerite. Small; very early: an improvement upon Doyenne d'Ete. Ripens early in June.

Philadelphia, Large, melting, very good; middle of July.

Summer Doyenne. DOYENNE D'ETE. Small, melting, very good; tree a medium grower; ripens early June.

Wilder. Small to medium; yellow, with dark red cheek; of vigorous and symmetrical growth. A valuable early market fruit.

WINTER AND AUTUMN.

BEURRE D'ANJOU. Large: Juicy: melting. A fine tree and regular bearer. September.

Angouleme. Duchesse D'Angouleme. Large; melting; juicy and well flavored. Vigorous grower and reliable bearer. August 15.

Diel. BEURRE DIEL. Large; buttery; rich; vigorous grower. September.

La France. Resembles Angouleme, but a month or six weeks later. A desirable variety.

Langelier. Beurre Langeller. Medium, juicy, vinous

and good; October and November.

Japan Persimmons (Diospyros Kaki)

The Japan Persimmon is thoroughly at home in the Cotton Belt. It does especially well in the Coast Region. Some varieties have succeeded in middle Kentucky and Virginia. We have also seen the trees growing successfully in southern New Jersey.

fully in southern New Jersey.

The tree is a vigorous grower and an early and most prolific bearer. In fact, the tree is apt to over-bear, and, therefore, the fruit must be properly thinned. The persimmon will succeed with little care or attention, but to get the best results it should receive the proper care and attention as to fertilization and cultivation.

This fruit is coming to the front for market purposes, and commands good prices, as it usually comes on the market in the fall and early winter. A careful selection of varieties will give fruit from August until frost. If the fruit is harvested before it is touched by frost, and house-ripened, the quality becomes greatly improved. For shipment the fruit should be packed in flat boxes with divisions, or in the standard six-basket carrier as is used for Peaches. Some varieties have dark flesh which are edible while the fruit is hard; whereas the light flesh varieties must be thoroughly matured before they can be eaten, as they are very astringent until fully ripened. The fruit of nearly every variety begins to color when half grown, but should be allowed to hang upon the tree until just before frost is expected, or in the case of early ripening varieties, when fully matured. Many of the late-ripening varieties can be kept until February. Some varieties will be seedless during certain years, and then again in other years they will contain more or less seeds: Furthermore, both round and pointed specimens are sometimes produced on the same tree.

PRICES OF TREES Budded and grafted, 3 year, 6 to 7 ft., heavy branched.

mong. Yemon. Round; flattened; deeply ribbed; dark orange-red; 2½ to 3 inches in diameter; average weight, 6 ounces; flesh red; very sweet and sometimes edible while still solid.

Costata. Medium. Conical, pointed; 2 1-8 inches long by 2 5-8 inches in diameter. Skin salmon yellow; flesh light-yellow; astringent while solid, excellent when ripe. Ripens late; fine keeper; tree a rapid and upright grower. Luxuriant foliage.

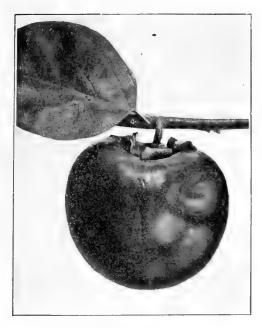

Goshio. Very large; round; somewhat flattened; 3 to

3 1/2 inches in diameter. Average specimen 10 ounces, and sometimes yields specimens 16 ounces in weight. Keeps late; flesh red; tree erect grower.

Hachiya. IMPERIAL, YOMATO, etc. Very large; oblong, with a blunt apex slightly ribbed; size 3 by 33-4 inches long by 3½ inches in diameter; flesh deep orange-red; astringent while solid, but sweet and very good when soft. Should be house-ripened and can be kept until March. The largest of all. Tree very vigorous and of tall growth.

Japanese Persimmon.

JAPAN PERSIMMON—Continued.

Hiyakume. This is perhaps the most desirable of all the round, red-fleshed varieties, and as the fruit affects various shapes, it is known under many names such as Pound, etc. Fruit large, averaging 3 inches in diameter and 5 ounces in weight; usually flattened, but elongated forms are quite common upon the same branch; flesh bright orange-red. Keeps very late; must be soft before being edible. Tree of moderate height.

Miyotan. Mazeli. Round, or slightly oblong; 2½ inches in diameter; skin deep orange-red; flesh usually deep reddish brown, but specimens of half-brown and half-red flesh are often produced on the same tree; keeps late. Brown specimens are edible while solid.

Okame, Mikado. Large, roundish, oblate, sometimes with quarter marks; point not depressed; skin orange-yellow, changing to brilliant carmine; flesh brownish red; good quality. Edible while solid.

Tamopan. BIG GRINDSTONE. This valuable, new, vigorous variety was introduced by Mr. Frank N. Meyer, Agricultural Explorer of the Department of Agriculture, Washington, D. C. In Japan this is considered the best of all persimmons. Fruit bright orange-red; skin thick and tough; flesh light colored; seedless; of excellent quality. Some without astringency and can be eaten while hard. The tree is a thrifty grower.

Triumph. Originated in Florida, but grown from seed imported from Japan. Tomato shaped; naedium size, imported 23-4 to 3 inches; bright red; skin smooth and bright red; flesh yellow, firm and of fine quality. Very few seeds. Tree a strong and upright grower; very productive.

Tsurunoko. Stork Egg; Mino Kaki. Large; oblong; 2½ by 3½ inches; weight, 4 to 5 ounces, sometimes 10 ounces; skin bright red; some specimens covered with black at apex; flesh red; very good; keeps late. Edible only when soft. Foliage long and shiny; tree compact, of vigorous growth.

Zengi, or Zingi. Small; 13-4 to 2 inches in diameter; weight, 3 to 4 ounces. Flesh dark brown, with dark spots. Very sweet. Edible as early as middle of September, while still solid. Tree is a strong, healthy grower, producing fruit very freely.

Plums

Native Plums

Cumberland. Originated near Augusta from seed collected upon the Cumberland Mountains in 1864. Large, yellow, juicy, sweet, good. Matures August and September. The best late Plum for this locality.

Wild Goose. Chickasaw Type. Large, somewhat oblong; bright, vermillion red; juicy, sweet; good quality; cling; a very showy and profitable plum; ripens middle of June.

Japanese Plums

Prunus triflora of botanists.
Prunus Japonica of pomologists.

Abundance. Yellow-Fleshed Botan. Round, with pointed apex, but varies from quite round to sharply pointed. Skin yellow, heavily washed purple-carmine and a darker cheek; flesh yellow, very juicy, subacid, with apricot flavor; quite firm; skin tough; clingstone; quality best; pit large. Maturity June 15 to July 5. One of the best early varieties, and valuable for northern and middle states. Carries well to distant markets.

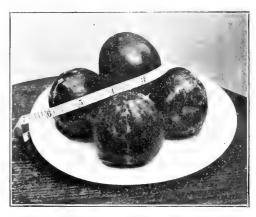

America. Originated by Luther Burbank; fruit very large, glossy coral-red; flesh light-yellow; best quality; a very hardy and valuable sort; ripens last of June.

Burbank. In general characteristics, resembles Abundance, or Yellow-Fleshed Botan, slightly differing in foliage. Color cherry-red, mottled yellow; shape usually more globular; flesh, flavor and quality are identical, but its period of maturity here is from two to three weeks later, or middle to last of July. The tree is of very vigorous habit. Valuable also for northern states.

Chabot. Length, 2 to 2½ inches by 2 inches broad; yellow ground, nearly covered with carmine-red; flesh orange yellow; very solid; subacid; quality very good; clingstone. Maturity end of July. Identical with Bailey of several growers.

Douglass. Munson; Haytan-Kayo. Large, pointed, dark, purplish-carmine, with blue bloom; juicy, sweet; very good; a clingstone; a fine variety; July 20 to August 1.

Formosa. Originated by Luther Burbank; fruit very large, heart-shaped, light-cherry red; flesh pale yellow, unusually firm, sweet, rich and of a delightful flavor; ripens in July.

Wickson Plum.

JAPANESE PLUMS-Continued.

Kerr, Hattankio No. 2. Variable in shape; perfectly round and pointed specimens sometimes produced upon the same tree; skin yellow; flesh yellow, juicy, subacid; quality very good; clingstone; very prolific; ripens June 10 to 20.

Red Nagate. RED JUND, or LONG FRUIT. 13-4 by 11-2 inches, pointed; skin thick; purplish red, with blue bloom; flesh yellow, solid, somewhat coarse-grained, juicy, subacid, with Damson flavor; clingstone; quality good. Maturity 10th to end of June. Very prolific, showy and attractive in color. It ripens a week before Abundance, and is the earliest large-fruited market variety.

Santa Rosa. Originated by Luther Burbank; fruit very large, deep purplish-crimson with a glaucous bloom; the flesh near the skin is purple shaded with rosy scarlet, and pale amber near the pit, which is very small. It possesses a refreshing acidity and delightful aroma. A good grower, good bearer, keeps well; ripens middle of June.

Satsuma. BLOOP PLUM; YONEMOMO. Large; skin dark purplish red, mottled with bluish bloom; shape globular, or with sharp points; flesh firm, juicy, dark red or blood-color. Well-flavored and firm; quality very good; pit small. Unsurpassed in quality for caning. Maturity middle of July. Tree very vigorous. One of the most valuable varieties for this section, and adapted to the middle and northern states.

white when half-grown, then the color gradually changes to pink and to dark crimson-purple; flesh very firm, yellow, juicy, subacid and highly flavored; pit small; clingstone; best quality. July 10 to 25.

European Plums

The following varieties of Plums do best in the Piedmont section:

Clyman. A California seedling, large, redish-purple; flesh firm; freestone; vigorous and a good bearer.

Shropshire. Of medium size; dark purple. Good for preserving. Thrives best in the Piedmont section. Very productive.

Quinces

These succeed best in strong, clay soils, in special localities, and in the Piedmont section. They can be grown in bush form. Being somewhat subject to leaf-blight, the trees should be sprayed with bordeaux mixture before the buds swell, repeating the spraying throughout the summer at intervals, as necessary. However, in some situations, Quinces seem to be free of blight.

Meeche, Larger than Apple Quince. Ripens early.

Rea. REA'S MAMMOTH. A very large and fine variety of Apple Quince. A thrifty grower and productive. By some considered the best of all Quinces.

Filbert.

Walnuts

ENGLISH OR PERSIAN WALNUTS (Juglans Regia.)

The English Walnut requires a rich, well-drained and preferably stony soil. Never plant in hard pan, heavy clays, or soils which are not properly drained. In some sections of the Eastern and Southern States the English Walnut is quite successfully grown. The trees we offer are all grown from the best French seed, and have been transplanted.

Juglans Cordiformis. NUT BREAD. Pointed; flattened; medium sized, somewhat resembling the shellbark hickory. If cracked longitudinally, the kernel can be removed entire.

Juglans Sieboldiana. Shaped like the butternut. Shell thicker than that of the English Walnut. A handsome tree; perfectly hardy in all parts of the country.

Pecans

Where soil and climatic conditions are proper, it has been practically demonstrated that Pecan-growing is a paying investment; but only grafted or budded trees of well-known and meritorious varieties, should be planted, and these varieties should have the following qualifications: Large size, good flavor, thin shell, easy-cracking quality, and freedom from disease; furthermore, the purchaser should know that the trees are propagated from grafts or buds taken from good, bearing trees.

It is a well-established fact that some varieties of Pecans, the same as with other fruits, are adapted to certain localities, whereas the same varieties are not so good in other locations. It is not yet known which variety is adapted to the greatest number of localities. There are scores of varieties now cultivated and new sorts are being advertised every year, but a half-dozen of the best tested and well-known sorts would be amply sufficient for any commercial grower.

Pecans should be planted from 50 to 60 ft. apart, according to soil, but this must be good; although the Pecan adapts itself to a great variety of soils—the rich alluvial soil of the river bottom and the high land of the sandy pine levels. The Pecan grows well on sandy land having a clay sub-soil, but it will not flourish in deep sand. Never set a Pecan in pipe clay land, or that which is not well drained. If the land sours the tree will die or will be so badly injured that it will never give satisfactory results. If you expect to get good results from your Pecans the trees must receive the proper care and attention as to cultivation, fertilization and pruning. If you do not propose to follow these directions better leave Pecans alone.

The best time for transplanting Pecans is just as soon as the trees are thoroughly matured in the fall, and the transplanting can be safely done until March. The land between the rows can be planted for several years in Cotton, Peas, Potatoes, Melons or any hoed crop. Never plant small grain in the Pecan orchard. When the trees have reached the bearing stage it is advisable to plant a cover crop of Peas, Soy Beans, Vetch, or Clover, and turn these under at the proper time.

The Pecan is long lived. Budded and grafted trees, if given the proper attention, will begin to bear 5 years after being set out, but paying results cannot be expected of the trees before 8 years of age. A 10 year old tree should produce from 15 to 20 pounds of nuts.

For fungus diseases and insects injurious to the Pecan, see page 6.

Directions for Handling and Transplanting Pecans.

Take great care in preventing the roots of trees from becoming dry by being exposed to the weather. Keep the roots moist and covered at all times. When taking the trees to the field for setting, they must be carefully covered with moss, wet sacks or something similar, to protect them from drying out. This is important. Only one tree should be removed at a time, and this set at once in the hole previously dug. The hole must be at least two feet wide and of proper depth. Cut off the ends of all bruised or broken roots. Use a sharp knife for this; do not use an axe or hatchet. It has been practically demonstrated that it is advisable to cut off a part of the tap-root, as this causes the roots to throw out laterals. This will allow the trees to receive more food, and at the same time affords it a firmer hold upon the land. Place the tree in the hole about two inches deeper than it originally stood in the nursery row; fill the hole about half full with well pulverized top soil in which there is a proper proportion of well-rotted stable manure. If this is not available, use the proper amount of high-grade fertilizer or bone meal. This must also be thoroughly mixed with the soil.

Pack the earth well about the roots of the tree—the firmer the better. Fill up the hole and pack the dirt

Pack the earth well about the roots of the tree—the firmer the better. Fill up the hole and pack the dirt well, but leave at least two inches of loose soil on top. If the soil is very dry, some water should be poured about the tree when the hole is partly filled. When the trees are more than four to five feet in height, the top should be cut back to within four feet of the ground. Do this after the tree is planted. Be careful not to break the eyes off the tree in handling. Keep them well cultivated and properly pruned.

We have had excellent results in planting Pecans with dynamite—one-half pound of dynamite placed four feet below the level is ample.

All our trees are budded or grafted on thrifty two and three year seedlings, and are, therefore, very hardy and satisfactory.

Frotscher. Very large, nuts averaging 45 to 50 to the pound. Shell very thin; can be cracked with the teeth; meat sweet and of fine quality, and can be removed entire from the shell. One of the best Pecans grown.

F

Jerome. Our stock is grown from the parent tree which originated in Louisiana. This is a seedling of Pride of the Coast, but far superior to the parent. The tree is very healthy and vigorous; nuts very large; shell about the same thickness as Pride of

PECANS-Continued.

the Coast. Good cracking quality and well filled. Runs 30 to 50 to the pound. For several years we inadvertently sent out this Pecan under the name of Pride of the Coast. The Jerome is unquestionably a very superior variety and a heavier bearer.

thley. Medium to large; 1½ to 17% inches long; Oblong, slightly flattened; shell thin; plump, rich flavor; good grower; one of the best. Schley

tuart. Nut large to very large; 1% to 2% inches long; oblong; shell of medium thickness, and of very good cracking quality; kernel full, plump, of best quality; flavor rich and sweet; a good grower; heavy bearer; excellent.

Van Deman. Nut large to very large; from % to 2% inches in length, slender, pointed at both ends; shell of medium thickness; excellent cracking qualities; kernel full and plump; flavor good; vigorous groower; large foliage.

Fruits Small

One of the low-growing, trailing Blackberries. In size and quality it equals any of the tall-growing sorts. Hardy and very productive, with large, showy flowers. Fruit sweet and luscious;

10 cents each; 50 cents for 10; \$1,50 for 50; \$2.00 per 100

Raspberries

Cultural Directions. The same as for Blackberries and Dewberries. These thrive best in a deep, moist well drained soil; the lighter loams are best for the red, and the heavy loams for the blackcaps. To make a success of Raspberries, the land should be able to withstand drought well. Cottonseed meal, pure ground bone, or fertilizers containing a good proportion of potters when the red bould be liberally explied during the so termizers containing a good proportion of por-ash are best and should be liberally applied during the winter and early spring. To get the best results and keep the plants in vigorous condition, they must be mulched heavily with straw. Columbia. Fruit resembles Shaffers; very large; pur-

plish; vigorous and productive. 10

Strong plants\$0.10 \$0.50 \$2.00 \$3.00 Cuthbert. Queen of the Market. This is the best and most reliable of the red-fruited varieties. Fruit large, red and of excellent quality, prolific bearer; ripens middle of May and continues for several weeks. Fine shipper.

100 Strong plants . . \$0.10 \$0.50 \$1.50 \$2.00 \$15.00 Golden Queen. Fruit golden yellow; similar in quality to Cuthbert, to which it is evidently a close relation. Its fine color attracts the eye. Prolific; withstands our summers.

Blackberries

Cultural Directions-Blackberries thrive on almost any soil, but the most desirable is a strong loam, re-tentive of moisture, tending toward clay rather than sand, but it must be well drained at all times. Fersand, but it must be well drained at all times. Fer-tilizers containing a good proportion of potash are the most desirable; too much humus or nitrogen will induce a rank growth of wood at the expense of the fruit. As a preventive of rust, spray with copper sulphate dur-ing the fall and winter, and with Bordeaux (4-6-50) during the spring and summer. The rows should be 6 to 8 feet apart, and the plants from 3 to 4 feet in the row, according to the character of the soil. If de-sired to cultivate both wear set the plants in stocke the row, according to the character of the soil. If desired to cultivate both ways, set the plants in checks 6 to 7 feet each way. As soon as the fruiting season is past, remove the old canes; these should oc burned at once. The young canes should be clipped off when they reach the height of about 2 feet; this will cause them to branch, and they will become self-supporting. Apply fertilizer during the late winter, and give shallow

and constant cultivation.

Eldorado. Very hardy and vigorous. Berries large;
borne in large clusters, and ripen well together; very

sweet; no core. A heavy bearer, and valuable sort.

10 cents each; 75 cents for 10: \$2.00 for 50;
\$3.00 per 100; \$20.00 per 1,000

u. A most valuable variety. Fruit of im-size. Early and enormous bearer: very hardy. 10 cents each; 75 cents for 10: \$2.00 for 50; \$3.00 per 100; \$20.00 per 1,000 mense size.

Dewberries

Cultural Directions—Use short, stout stakes, driven at the end of each row of canes, with a cross-piece 18 inches long nailed to each stake, 2½ to 3 feet from the ground. On the top, near each end of these cross-pieces, drive a stout nail, slanting toward the stake, upon which to catch a wire. Two lines of No. 14 galvanized wire, one on each side of the row, are fastened to one of the end stakes and run on the ground between the rows to the other end stake. These wires are now drawn as taut as possible and securely fastened to the other end of the row. The wires are now raised to the other end of the row. The wires are now raised and caught in the nails, thus holding all the canes closely together in the row.

Dewberries should be mulched to keep the berries

from the ground.

Grapes. Native Varieties

The varieties below described have been thoroughly tested by us. In addition quantity of vines of several other good sorts. Our plants are strong and vigorous. In addition we can supply a limited

In transplanting Grapes, leave the main branch and cut this back to two or three eyes. The usual distance for planting Grapes is 10 by 10 feet. If you want to get good results from your Grapes, prune annually. PRICES OF ASSORTMENT, OUR SELECTION OF VARIETIES:

OR PURCHASER'S SELECTION. Not less than five vines of one variety will be charged at the rate for 10; not less than 40 vines of one variety will be charged at the rate for 100. FOR PURCHASER'S SELECTION.

Agawam. Rogers' No. 15. Large; dark red. 10 cents each; 80 cents for 10; \$5.00 per 100

Lutie. Sweet; very pulpy; skin tough; quality fair, but a very hardy and valuable variety.

15 cents each; \$1.25 for 10

Mary Wylie. Berry above medium, slightly amber tinted; highly flavored; flesh dissolving, vinous and delicate; quality best; skin thin.

Massasoit. Rogers' No. 3; bunch medium; rather loose; berry medium, brownish-red; tender and sweet.

15 cents each; \$1.25 for 10; \$6.00 per 100

Moore. Moore's Early. Bunch medium; berry large, round; black, with heavy blue bloom; medium quality. Very early, desirable market sort.

15 cents each; \$1.25 for 10; \$6.00 per 100

Muscat of Alexandria. (European). Very large bunches: berry light yellow; delicate muscat flavor. A very popular variety for forcing under glass.

25 cents each

Niagara. Bunch and berry large: greenish-yellow; flesh pulpy, sweet, foxy. Its remarkable size and fine appearance give it much popularity as a market variety; vigorous and prolific.

10 cents each; 80 cents for 10; \$5.00 per 100

Progress. Bunch large; berry medium, purple; pulp tender, vinous; an excellent table Grape. 15 cents each; \$1.25 for 10

Salem. Rogers' No. 53. A strong, vigorous grower, berries large, color of Catawba; thin skin; sweet and sprightly.

15 cents each; \$1.25 for 10; \$6.00 per 100

Worden. Resembles Concord, but is a few days earlier, and generally regarded as a better Grape.

15 cents each; \$1.25 for 10; \$6.00 per 100

Bullace or Muscadine Grapes

(Vitis Rotundifolia or Vulpina.)

This type is purely southern, and is of no value for the northern or western states. Vine is free from all disease. The fruit never decays before maturity. The product is very large, and the cultivation reduced to the simplest form. Plant from 20 to 30 feet in a row; train on an arbor or trellis.

Strong, 2-year, heavy, transplanted vines, 20 cents each; \$1.50 per 10; \$12.00 per 100

Flowers. Bunches have from 15 to 25 berries; black and of sweet, vinous flavor. Matures from end of September to end of October, or four to six weeks later than Scuppernong.

James. Berries very large; blue-black; in clumps of from 6 to 10; skin very thin; pulp tough, sweet and juicy, but not dissolving; quality very good. A showy variety. Ripens after Scuppernong.

Scuppernong. Berries large; seldom more than 8 to 10 in a cluster; color brown; skin thick, flesh pulpy, very vinous, sweet, and of a peculiar musky aroma. A certain crop may be expected annually. Vine is free from all disease and insect depredations. Fruit has never, been known to decay before maturity. Wonderfully prolific. Popular wine Grape; wine. when properly prepared, resembles Muscatel.

Thomas. Bunches from 6 to 10 berries; berries slightly oblong, large, violet, quite transparent; pulp tender, sweet and of a delightful vinous flavor. Best of the type. Very little musky aroma. Makes a superior wine Grape. Matures middle to end of August.

Miscellaneous Fruits

Citrus Fruits

Citranges. These are products of Mr. Weber, of the United States Department of Agriculture, Washington, D. C. They are crosses of the Citrus trifoliata and the best varieties of Oranges in cultivation. In these crosses Mr. Weber has made it possible to produce fairly palatable Oranges in section of the country where the mercury goes to zero. These Citranges have been tested for a number of years, and in this section it is seldom that the foliage is injured by the cold. The leaves are trifoliate, but of large size: thus showing the blood of the Citrus trifoliata and the Orange.

We offer strong, grafted plants of several named varieties as follows:

Morton, Rusk Willet and several other new varieties:

ORANGES. Satsuma, or Oonshiu. This is the hardiest known Orange. At Augusta the trees have stood without injury a temperature of 12 degrees above zero. The tree is of dwarf and drooping habit with a broad, spreading head, thornless. The fruit is of medium size, flattened like the Mandarin; color deep orange; flesh tender and juley, seedless. Ripens at Augusta in September or October. All of our Satsuma are grafted and budded upon Citrus trifoliata and are field-grown.

Pomegranates

The Pomegranate is hardy in the gulf states and central sections of Georgia and the Carolinas. The plants will frequently attain a height of upward of 20 feet. It is of good form and foliage; bright scarlet flowers make it a most ornamental plant. It bears early and profusely. The demand for the fruit is increasing in eastern markets, and the Pomegranate is being grown in some sections on a section of the contraction. being grown in some sections on an extensive scale. The fruit carries well to distant markets.

Ornamental Department

Deciduous Shrubs

It is seldom that a home in the country, suburb or town cannot be improved in appearance and greatly enhanced in value by the judicious treatment of the grounds, irrespective of size; and for this purpose many flowering shrubs lend themselves most admirably. Shrubbery, properly panted and massed, is most effective in bringing out certain features of the lawn, to screen some unsightly building or object, or to break the outline of foundation walls.

Along the drive, the walk or the edge of the lawn, borders of shrubs may be planted that will give a succession of bloom from early spring until frost. Even after the leaves have dropped, the brilliant berries and branches of many varieties add cheer and color to the winter landscape. Frequently one finds a spot that suggests the use of an individual specimen—in such case a variety should be selected that will develop symmet-

The demand for ornamental shrubs increases annually, and to meet this we have increased our plantings; and our acreage in ornamentals is larger than ever before, and we are in a position to supply many varieties in carload lots. In addition to the shrubs that are best adapted to the various sections of the South we grow many of the hardler kinds suited to the colder sections of the North and North-West.

PLANTING AND CULTIVATING SHRUBS.

The same directions for the preparation of the soil and planting as given for deciduous fruit trees on page 5 apply to the average deciduous shrub. We cannot, however, too strongly emphasize the necessity of keeping the ground free from weeds and grass, and loose by frequent stirring, after being planted.

Do not fail to properly prune your shrubs as soon as planted. The success of your plants depends upon proper pruning. All deciduous shrubs should be pruned annually. The tops and branches should be cut back one-third or one-half if necessary; all dead branches and weak growth should be removed, and care must be exercised not to cut off the blooming wood. All shrubs that flower on the previous year's growth should not be pruned until June or July, or after the blooming period has passed. To this class belong the Althæas, Cydonias, Deutzias, Forsythias, Philadelphus, Spiræa, etc., but such varieties as Ceanothus, Hydrangea, Lonicera, Lilac, etc., which produce flowers upon the young growth, should be pruned during winter. Do not fail to feetilize your shrubs at least once a year fertilize your shrubs at least once a year.

Cercis. Judas Tree.

Cercis Siliquastrum. A new form which originated in our Nursery. A large growing shrub or small tree; leaves heart-shaped, and, like the other Cercis, assumes a yellow tone in autumn. This Judas Tree is the most profuse bloomer we have ever seen; deep lavender colored flowers, four times as large as that of our native Judas Tree. They are produced in large bunches, and when in full bloom, the tree is an entire mass of color. We have tested this variety for several years, and, in offering it, we are sure that it will become a great favorite. The original plant is about 12 feet in height.

Citrus

Citrus trifoliata. HARDY ORANGE. As an ornamental flowering plant, few are more desirable. The plant attains a height of 10 to 15 feet, and is very bushy and thorny; foliage trifoliate, retained quite late, but is not an evergreen here; however, the vivid green wood gives it an evergreen appearance during winter. In early March the pant is covered with a mass of large, single, white flowers, and a second and third crop of blooms, of smaller size, are produced during summer. The bright golden fruit is retained during winter, which makes this plant a showy garden feature. It is also an excellent hedge plant.

Herbaceous Plants

Iris

Iris Germanica. GERMAN IRIS OR FLAG. The German Iris is one of our most desirable early spring-blooming plants. It is a vigorous grower and is of easy cultivation. Flowers are large and conspicuous. The colors are white, blue, purple, yellow, and variously veined and striped. Every garden should contain a collection of these Flags. Ten distinct named varieties.

PRICES: Strong roots, 15 cents each; \$1.25 for 10; \$10.00 per 100.

Iris Kaempferi. JAPANESE IRIS. These handsome spring-blooming plants are becoming popular. They begin blooming about the middle of April and continue in bloom for five or six weeks. Many of the blooms have a diameter of from 8 to 12 inches, and are of various colors—white, purple, violet, mauve, magenta, variously marked and penciled. They are invaluable in herbaceous plantings; are extremely hardy and easily cutivated. Most effective where planted along the borders of ponds or streams. If the flower-stalks are cut just as the buds are expanding, and taken indoors, the flowers will last a long time, and as one flower fades another bud will open until all have shown their beautiful colors. With proper attention, this Iris will give a wealth of bloom and color. Twelve of the best named sorts. Iris Kaempferi. Japanese Iris. These handsome

Peonies

Peonies, Herbaceous. The varieties we offer have been thoroughly tested in this locality and have given most satisfactory results. We offer twelve to fifteen best sorts, double and single, white and several shades of pink, rose and red. Peonies do best in rich, rather moist, loamy soil, and if plants are pro-

tected from the hot afternoon sun, they will give excellent results. They should have a liberal supply of water at all times, especially when in bloom during April and May. Fertilize well with cow manure. Keep the ground well cultivated. If these few simple directions are carried out, the result will be most satisfactory. Plant during fall.

PRICES: 40 cents each; \$3.50 for 10; \$30.00 per 100.

Peony.

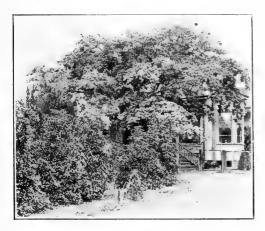

Deciduous Trees

The intelligent tree planter readily appreciates the difference in value between a tree dug in the forest and one taken from our nursery where it has received proper care during the first years of its life. The one is tall, slender and with only a small top; the other is sturdy, with well-developed trunk and a top that is a promise of its future beauty and usefulness as a shade tree. All of our trees have been transplanted several times and plenty of room for development allowed in the row. The root-system is perfect, and, when our nursery-grown trees are properly set and prope are properly set and pruned, there should be no loss.

Directions for Planting and Pruning. Before setting out, cut off the broken or bruised roots, should there be any. Trees with branching heads should have the smaller branches cut out, and the larger branches cut back to within three or four buds of their base; but, when a tree has an abundance of roots, and a small top, and to within three or four buds of their base; but, when a tree has an abundance of roots, and a small top, and the within three or four buds of their base; but, when a tree has an abundance of roots, and a small top, and However, when the roots are small and the top heavy, then prune the tree severely. In many cases remove every lateral limb, preserving only the leader, and this, if too long, may be cut back to the proper height. Frequently large trees are transplanted without pruning. This neglect will often cause the tree to die. Dig the hole intended for the tree of ample size, so when the young roots start out they will have soft ground in which to grow. The best fertilizer is well-rotted stable manure, thoroughly mixed with the soil.

Plant about two inches deeper than the tree originally stood in the nursery row, using the top soil for filling in around the roots. See that every interstice around the roots is thoroughly filled, and that every root is brought into contact with the soil. When the hole is nearly filled, pour in a bucket of water, so as to set the soil around the roots, then fill in the balance of the hole and press the dirt gently with the foot. When the tree is planued, mulch with five to six inches of well-decomposed stable manure, or rotted leaves; this should extend over the circumference of the hole. Keep free from grass and weeds, and loosen up the soil occasionally

Mimosa Tree.

Mimosa Tree. Acacia.

Acacia Julibrissin. (Albrizzia). A rapid-growing tree with spreading branches and a low, flat-topped head; foliage fine and feathery; pink flowers in large heads borne at tips of branches; blooms middle of May and continues for several weeks; a remarkably fine

tree

Acer Japonicum. Japanese Maple.

For many years it was considered impossible to grow Japanese Maples in this section, but where the trees are given the proper care and attention and planted in a shady situation where they are protected from the afternoon summer sun, these beautiful plants will give most satisfactory results. The Japanese Maples combine many attractive features, both in shape and color foliage. The foliage is delicately and finely cut and of foliage. The foliage is delicately and finely cut, and of longe. The longe is deficately and finery cut, and the decorative value of these Maples has long been recognized by all lovers of beautiful trees.

The best effect is secured by planting the various kinds in a bed; thus a pleasing color effect is given.

For this purpose the plants should be set about 3 to 4 feet apart.
We offer about 10 or 12 of the best, most distinct

and hardiest sorts. and hardiest solves.

Aleurites. Candle Nut.

Aleurites Fordii. The Tung Oil or Wood Oil Tree of China. A medium-sized tree indigenous to central China; reaches a height of 20 to 30 feet, with a spread of 25 to 30 feet. The rather large, pinkish white flowers, which appear in large numbers in April, with the broad, handsome, green leaves following, make the tree a valuable ornamental. It thrives best in well-drained sand-clay loams. The tree is reported to live to the age of 30 years or more. The apple-like fruits contain several large nut-like seeds which yield the valuable tung oil or China wood oil of commerce, used extensively in

ALEURITES—Continued.

paints and varnishes. Commercial plantings should be confined to cheap lands, as the probable yield of oil will not pay for the use of more valuable ones. Experimental plantings of this tung tree have been started in Florida, Georgia, Alabama and South Carolina. It is quite distinct from the Candlenut Tree (Aleurites moluccana), in being hardier and deciduous. This tree is becoming very popular as an ornamental. It is perfectly hardy at Augusta.

Broad Leaved Evergreens

We can supply large specimen plants of many varieties of Broad-leaved Evergreens described in this catalogue. Descriptions, prices and sizes will be given to prospective purchasers. All of our plants are most carefully grown, frequently transplanted, pruned and given plenty of space; therefore the plants which are offered are stately, vigorous and healthy.

Many of our evergreens are grown in pots, thereby increasing safety in transplanting. In fact, it is impossible to transplant some varieties of Broad-leaved Evergreens which have been grown in open ground; therefore, to make the transplanting of these particular varieties assured, we grow them in pots.

Nearly all plants which are taken from the open ground are lifted with a ball of earth about the roots. This is wrapped in moss, excelsior or burlap. When transplanting evergreens which have a ball of earth about the roots and same wrapped in burlap, it is not necessary to remove this burlap. Place the plant to the right of the properly prepared hole; cut the string so that the burlan can be released from about the ball of earth around the roots of the plant. It is not necessary to remove the burlap from the hole, but when the ball of earth about the roots of the plant is wrapped in moss or excelsior this wrapping must be carefully removed, but the earth about the roots should not be disturbed. When the hole has been half-filled with earth, pour in water freely, but not so as to wash the soil from about the roots of the plant. After the water has settled put in more dirt and firm this well about the roots of the plant, and then fill up the hole.

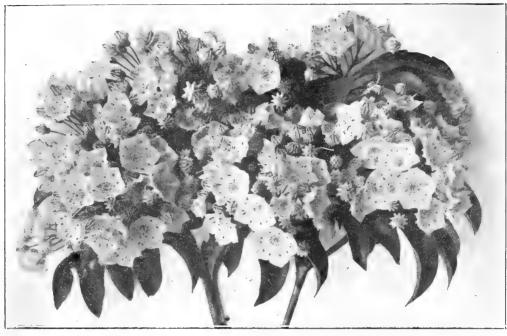

In transplanting broad-leaved evergreens the soil should be properly prepared and holes of ample size dug and fertilized. In all cases the fertilizer must be thoroughly incorporated with the soil. If the roots of the plants come in contact with the unmixed manure the plants are apt to die. Should the ball of earth about the roots of broad-leaved evergreens fall away, then the plant must be defoliated and properly pruned.

Even when the ball of earth about the roots of plants remains intact it is advisable to prune severely and defoliate such plants as Abelia, Cerasus Caroliniana, Camphor, Citrus Fruits, Cotoneaster, Crataegus, Elaeagnus, Ilex, Laurocerasus, Ligustrums, Neriums, Photinia, Quercus.

It is advisable to place a mulching of well-rotted leaves to a depth of 4 to 6 inches about the plants, as this

Kalmia Latifolia.

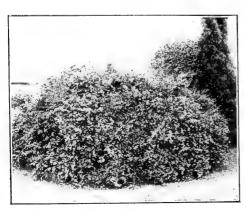

mulching conserves the moisture in the soil, and the roots are protected from the sudden changes of temperature. In the summer the mulching prevents drying out of the soil, and in winter freezing.

We are beginning to appreciate more and more the effect attained by a proper planting and selection of Broad-leaved Evergreens. We are particularly fortunate in being able to grow in this favored locality such a large collection of Broad-leaved Evergreens. We can successfully grow in this section many kinds which are not hardy in the far North, and we also bring to perfection a large portion of the hardy northern Evergreens. A judicious selection of varieties, with the proper planting arrangement of Evergreen trees and shrubs, gives to the winter aspect of our home grounds a warm and cheerful effect.

Certain varieties must be planted in the proper situation and given specially prepared soil; otherwise they will not give satisfactory results. We will gladly suggest or recommend the best varieties for certain soils and localities.

All Broad-leaved Evergreens are pot-grown unless otherwise stated.

PRICES OF SPECIAL COLLECTIONS.

Abelia grandiflora.

Abelia

Abelia grandifiora. (A. rupestris). One of our most beautiful, popular and satisfactory broad-leaved evergreens. The graceful, drooping stems and branches are covered with dark, glossy leaves which in winter assumes a metallic sheen. From the middle of May until frost this plant produces an immense quantity of tubular-shaped white flowers about an inch long which are borne in clusters. The accompanying photo will give an idea of the beauty of the Abelia. During the growing season it is advisable to pinch off the ends of the long shoots. This will make the plant dense and compact. For single specimens, for groups, or for a hedge we cannot too strongly recommend this plant.

Hardy as far north as Philadelphia. Has also been

Hardy as far north as Philadelphia. Has also been successfully grown in sheltered positions in Massachusetts, and, even when partially killed back, the young shrubs flower profusely the same season.

Aucuba. Gold Dust Tree.

This beautiful plant is not sufficiently appreciated. When in the open ground it gives the best results when planted in a shaded situation, in a somewhat moist though rich, well-drained soil. This genus contains both male and female plants. If the latter are planted near the male plants they will produce a profusion of red berries which makes them very attractive. Aucubas are especially desirable for city gardens when same are exposed to smoke. These plants are also largely used for vases, urns and window boxes. Hardy at Washington, D. C.

A. Hinodegiri (Home-Grown.) A magnificent, hardy, early-blooming Japanese Azalea; decided improvement upon A. amoena, which it somewhat resembles in habit of growth, but is a more vigorous grower and foliage is heavier. Bright carmine flowers are produced in enormous quantities. In fact, when in full bloom the plant is almost a solid mass of color. Remains in bloom for a long period. In the winter and fall months the foliage assumes a reddish appearance. This variety is hardy in New York.

These beautiful shrubs are perfectly	hardy	in the

open in this latitude. Some varieties of the Indian Azaleas are also hardy in the mountain sections, but to get the best results, Azaleas should be planted in a somewhat shaded situation, especially where they are protected from the hot, afternoon sun of summer.

The best soil is one containing an abundance of leaf

The best soil is one containing an abundance of leaf mold, peat and sand, but soil should be well drained. Azaleas will not succeed in limestone soil. The plants must be kept well mulched with rotted leaves, preferably leaves of hardwood trees. When planted in masses of soild, well-contrasting colors, the effect is most pleasing.

ing.

If the plants are grown in pots, they should be repotted after flowering and before the new growth begins. Keep the plants sheltered for a few days, and then plunge the pots in the open ground in a shady situation, or they may be planted in an open border and kept shaded.

situation, or they may be planted in an open and kept shaded.

If the plants are required for winter blooming in the conservatory, they should be lifted and repotted before very cold weather and kept in a cool greenhouse. By judiciously selecting the varieties, a continuous supply of flowers may be had from January until May.

Judiciously selecting the varieties, a continuous supply of flowers may be had from January until May.

We offer several thousand Home-grown Indian Azaleas in about 50 varieties of the sizes as described above. In the varieties with single flowers we offer all shades of crimson, scarlet, purple, salmon, white, and many exquisitely variegated, mottled and striped varieties. In the varieties with double flowers we can only supply two double whites. All our plants are grown in open ground during summer and lifted and potted in October when they are thoroughly matured. In this latitude it is best to plant Δzaleas in open ground in March and April, but southward they can be safely planted from October until April.

October until April.

Azaleas are liable to attacks of red spider and thrips, especially if the plants suffer from want of proper watering. Daily syringing of plants kept under glass

AZALEA INDICA-Continued.

will aid in eradicating these pests, as also will a spray of sulpho-tobacco soap.

A well-fed, well-tended and well-pruned Azalea need never grow scraggy and misshapen with age, but should become more beautiful every year, as its increasing spread of branches gives room for the display of myriads more of flowers. Those who grow Azaleas in the house should remember that the flowers will last much longer if the plants are kept in a cool room after they have expanded.

Berberis Japonica.

Berberis. Barberry.

Berberis Japonica. (Mahonia Japonica). Japanese Barberry. This splendid plant thrives in almost any situation, but does best in a partially shaded location, where the ground is well drained. Leaves very broad, with five pairs of leaflets; flowers yellow in long spikes during the first three months of the year, followed by dark purple berries. A magnificent shrub. Hardy at New York in protected situations.

PRICES: Each 10 100 18-24 in., heavy, open ground ...\$0.75 \$6.00 12-18 in., heavy, open ground ...\$0 4.00 10-12 in., heavy, open ground ...\$0 \$25.00

B. Sargentiana. A very handsome, new, hardy Berberis introduced by the Horticultural Explorer, Mr. S. A. Wilson. This attractive evergreen grows to a height of about 6 feet, with a corresponding breadth. It is very densely branched. The leaves are narrow and dark-green, 3 to 6 inches long. An excellent hardy Berberis, and is considered one of the best.

NOTE—We may be able to supply some large specimen plants of imported Camellias. These plants should vary in height from three to seven feet, or more, and be well-branched. Prices, description and sizes upon application.

CULTIVATION OF CAMELLIAS.

For Open Ground—To get the best results Camellias should be planted in a partially shaded situation, especially where protected from the cold winds of winter and the hot, afternoon sun of summer. Any good garden soil is suitable, but if mixed with leaf mold and well-rotted cow manure better results will be obtained. The plants should be kept thoroughly mulched with well-rotted leaves. In this section the best time to transplant Camellias is from early October until middle of November, and from middle of February to end of March.

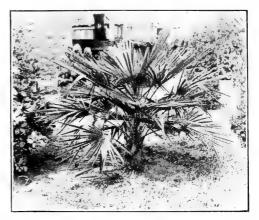

The plants should be kept thoroughly mulched with well-rotted leaves. In this section the best time to transplant Camellias is from early October until middle of November, and from middle of February to end of March. For Conservatories—Use a potting compost of peat or leaf-mold and good loam, and give ample drainage. When in growth, they require an abundance of water and spraying of the foliage. When dormant, water sparingly and keep in cool temperature. Fire heat is not needed except during excessively cold weather which would injure distending buds. Dropping of buds is caused by plants drying out, or by over-watering, or being kept in high temperature under glass.

Cerasus. Carolina Cherry.

Cerasus Caroliniana. (Prunus Caroliniana). Mock Orange of the South. This well-known hardy evergreen can be safely classed as a tree, as it attains a height from 20 to 40 feet. It is very desirable as a single specimen or for grouping, as it makes a most effective background in landscape work. Can also be pruned in standard, pyramidal, and other formal shapes. We offer a fine stock of thrifty, transplanted plants. As the Carolina Cherry is difficult

to transplant, it is always advisable to defoliate and cut back severely, and unless authorized to the contrary all plants will be so treated before shipment.

Chamaerops Fortunei.

Chamaerops. Palm.

Chamaerops Fortunei. (C. Excelsa). Chusan Fan Palmetto. This is without doubt the hardiest of all exotic palms. Easily stands zero weather without injury. Fine specimens are grown in the northern part of South Carolina and Georgia. The plant attains a height of 12 to 15 feet. Seems to adapt itself to a great variety of soils, but will give best results when grown in a rich, heavy, well-drained soil. Very graceful and ornamental.

Cinnamomum. Camphor.

Cinnamomum Camphora (Laurus Camphora). Camphor Tree. This desirable and beautiful tree is hardy at Augusta. In central Georgia there are some magnificent trees over 30 years old, and these have rarely been injured by frost. Along the Atlantic and Gulf Coast it is largely used as a shade tree for street and avenue planting. In Florida the Camphor is now being extensively and successfully planted for the extraction of gum. The tree is of a very rapid and stately growth; leaves bright, glossy green. The young growth is very attractive, as it is tinged with red which gives a most striking and pleasing effect. The Camphor will do well on poor soil, but will give a most satisfactory growth when properly fertilized and when grown on well-drained soil. It does not thrive in wet situations. In transplanting,

Citranges are products of Mr. Weber of the United States Department of Agriculture, Washington, D. C. They are crosses of the Citrus trifoliata and the best varieties of Oranges in cultivation. In these crosses Mr. Weber has made is possible to produce fairly palatable oranges in sections of the country where the mercury goes to zero. These Citranges have been tested for a number of years, and in this section it is seldom that the foliage is injured by the cold. The leaves are trifoliate but of large size; thus showing the blood of the Citrus trifoliata and the Orange. We offer strong, grafted plants of several named varieties as follows:

Morton, Rusk, Willet, and several other new varieties. Each 1.0 \$10.00 4.00

Kumquat or Kinkan. We offer two varieties of this popular little citrus fruit—Marumi, round; Nagami, oblong. This plant is of dwarf, bushy growth, seldom exceeding a height of 10 to 12 feet, and is of compact and spreading habit. Fruit about the size of a small plum; rind sweet; juice acid. It is eaten whole. Also excellent for preserves and marmalade; exceedingly productive; an early bearer. Will stand

Orange Satsuma, or Oonshiu. This is the hardiest
known edible Orange. At Augusta the trees have
stood without injury a temperature of 12° above zero. The tree is of dwarf and drooping habit with
zero. The tree is of dwarf and drooping habit with
a broad, spreading head, thornless. The fruit is of
medium size, flattened like the Mandarin; color deep
orange; flesh tender and juicy, seedless. Ripens at
Augusta in September or October. All of our Sat-
suma are grafted and budded upon Citrus trifoliata
and are field-grown. This is a very ornamental tree, both for its fragrant blossoms and showy fruit.

Kalmia. American or Mountain Laurel.

Kalmia latifolia. Calico Bush. One of the most beautiful native broad-leaved evergreen shrubs, sometimes attaining the size of a small tree in the upper sections. When under cultivation it is a broad and compact growing shrub. Its thick, waxy, bright, darkgreen leaves give at all times a striking effect, but the plant is at its best when its pink and white geometrically-shaped flowers appear and expand into beautiful white and pink colored flower cups. The blooms appear in early April and last for several weeks. The Kalmia is hardy from New Brunswick to northern Florida. Will succeed in almost any soil, but will give the best results when planted in a rich, leamy soil containing an abundance of leaf mold. The plants should be kept well mulched.

Laurocerasus. English or Cherry Laurel.

(Prunus Laurocerasus)

These are valuable shrubs. Their principal merits are great vigor; beautiful, broad shining foliage; of easy cultivation, and thrive in any ordinary, good, well-drained garden soil. Not hardy north of Washington, D. C. They attain a hight from 12 to 15 feet with a corresponding breadth. The plants do not bloom until they are several years old, when they produce spikes of

small, white flowers. For massing or for single specimens few plants possess more advantages than the English Laurel.

Raphiolepsis Indica. Indian Hawthorn.

Raphiolepsis Indica. (Crataegus Indica). INDIAN HAW-THORN. A dwarf-growing shrub with spreading branches; leaves ovate, very dark green. White flowers produced in loose panicles in early spring, followed by black berries which are retained for a long Exceedingly rare.

PRICES:

Rhododendron.

Rhododendrons by some are considered difficult to grow. This erroneous idea is due to lack of knowledge con-cerning these handsome plants. The Rhododendrons naturally love a shady situation, especially where they are protected from the afternoon sun. As Rhododenare protected from the afternoon sun. As knowledged from surface feeders it is very necessary that the beds be properly prepared. Excavate to a depth of 2 or more feet; fill in with a mixture of leaf mold, loam or pest, and sand so as to give good drainage. The above should be thoroughly rotted and mixed A liberal amount of well-rotted stable manure can also be used with the above mixture, but never use heating manures. Keep the plants well mulched with leaves and water during periods of drought. If these directions are carried out Rhododendrons will give most satisfactory results.

Rhododendron Catawbiense, Rose Bay, Catawba Rhodo-DENDRON. This is our native variety from the Alleghany Mountains, and those who have visited these mountains can appreciate this grand plant. Flowers lilac-purple.

12-18 in., branched\$1.00 \$8.00

Rhododendron Hybrid Catawbiense,

R. Catawbiense. HARDY HYBRIDS. We offer a beautiful lot of the best named varieties. The colors vary from pure white to deep purple and all shades of red, crimson, rose and pink. When planted against a back-ground of green and in harmonizing colors they give a most charming effect. Then, too, when the flowers have faded, the plants themselves make a green shrub border that is unusually attractive. The varieties vary in color from pure white to deep purple and all shades of rose, pink and crimson. The plants should be set in a rich, shady situation, and the soil should contain well-decayed leaf-mold and peat. Keep the plants well mulched with rotted leaves. Not being deeply rooted, they are apt to be injured by drought. Plants begin to bloom last of April.

PRICES:

Climbers and Trailers

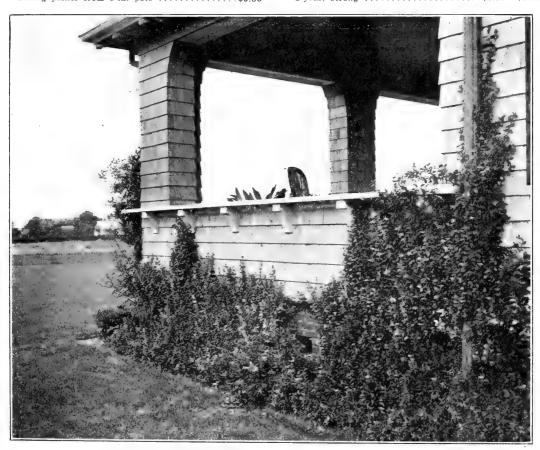

Climbing plants are indispensable for mony ornamental uses, and are decidedly useful in nearly all of our garden operations. Some varieties are especially desirable for the beauty of their flowers; others for attractive foliage. They are easily cultivated, but must have proper care and attention in the matter of training. Possibly no Climbers offer greater possibilities as ornaments than Clematis Paniculata. Rhynchospermum and Wistaria; while Bigonias, Climbing Roses and Elaægnus are very useful for trellised hedges. Our Climbers are carefully grown and properly pruned, and are unusually vigorous. Nearly all in the lists are hardy in the North.

Prices for special collection, 10 strong plants, in 10 varieties, our selection, \$2.00; \$15.00 per 100.

and scarce variety.

Coniferous Evergreens

Evergreens are always in favor for landscape work, their deep green foliage making a strong background for the brilliant colors of summer; but it is in winter, when the northern landscape is barren of color and foliage, and the beauty of the southern greatly lessened, that they are most appreciated, the absence of other colors tending to bring out their beauty of form in a most striking manner.

It is an undisputed fact that at Fruitland Nurseries we grow the largest and most varied stock of coniferous evergreens in the southern states, and especially do we give attention to such varieties as are best adapted to this warmer climate. In our collection of Biotas, Cupressus, Retinosporas, Juniperus, etc., may be found many rare and valuable specimens. We also grow large quantities of the hardier varieties, adapted to the northern part of the country. part of the country.

Our conifers are grown in the most careful and scientific manner. Nearly all of the open-ground plants have been grown one year in pots and then in the open ground, and are afterwards several times transplanted. Therefore we can offer to our patrons plants with excellent root-systems. Many varieties of conifers are grown in the open ground during the summer, lifted in the early fall and potted, and, before being shipped, plants have already started new roots. All plants, both from open ground and pots, are shipped with a ball of earth around the roots, which is wrapped in burlap or moss.

DIRECTIONS FOR PLANTING CONTFERS.

Place the plant in the properly prepared hole; cut the string, so that the burlap can be released from about Place the plant in the properly prepared hole; cut the string, so that the burlap can be released from about the ball of the plant, and plant in the same manner as instructions given under head of Broad-leaved Evergreens. Keep the plants well watered and mulched. The best seasons for transplanting are from November to December, and from February to March, but in the lower sections, where the ground does not remain frozen during the winter, planting can be successfully done any time when the ground is in proper condition. We have a superb lot of shapely plants of many varieties of conifers. These are from ten to twenty years of age, and have been several times sheared and transplanted. Those desiring immediate effect will secure it by using the above-mentioned specimens. The prices vary from \$5.00 to \$100.00 each according to size. See "Specimen Conifers" page 50 ifers," page 59.

aurea nana. BERCKMANS' GOLDEN ARBOR-VITAE. aurea nana. Berckmans' Golden Arbor-Vitae. The most popular Biota grown. Originated by us at Augusta. This conifer is of dwarf, compact and symmetrical habit. A perfect gem for small gardens or cemetery lots. For window boxes and vases this plant is most effective. It is desirable where it is too cold for Palms and other decorative plants. For formal planting it is at its best. When planted in high, well-drained soils and in a protected situation the plants have stood 15 below zero without injury.

Specimen Conifers

and transplant well.

We have a remarkably fine lot of specimen conifers which have been very carefully grown. They have been several times transplanted and sheared and are, therefore, perfect specimens in every way. Many of the plants offered are 25 years of age. As these large conifers have been several times transplanted they lift with a large ball of earth about the roots, this is carefully wrapped in burlaps. In shipping the plants they are carefully crated, except in carload lots when it is not necessary to crate them. Prospective purchasers would do well to look over our stock.

F. K. Druschki.

Roses

All of the roses described in this catalog have been thoroughly tested in our grounds. We try out annually all of the leading new sorts, many of which will never appear in our catalog, as they failed to measure up to our standard. Before sending roses to our clients we must be assured that they are good growers and free bloomers. Of course, some roses will give better results in certain localities than others, and some of the forcing roses will not stand in open ground, and vice-versa. Strong, field-grown roses have always been

one of our specialties. For many years our roses have been noted for their sturdiness and unusual vigor. Roses grown at Augusta are giving splendid results in Canada and other cold sections.

Our soil is especially adapted to developing the rose properly. Our one year, field-grown plants equal the average two-year, field-grown plants of the North and West.

No garden, it matters not how small, is complete without roses, and every landscape scheme should be provided with a place for the rose.

We grow roses on own roots, also budded on Manetti. Some varieties of roses do not give satisfactory results unless budded. These budded roses are especially desirable for Florida and sub-tropical sections, as their roots penetrate the soil to a greater depth than the own root plants.

DIRECTIONS FOR GROWING ROSES.

Soil and Preparation of Same.—The rose will adapt itself to almost any well-drained soil, but will give best results when planted in a good, rich, deep loam which has been thoroughly drained and well fertilized. If, however, the soil is thin and sandy it is advisable to add a good proportion of heavy soil. It is best to plant roses in an open, sunny place where the plants will be exposed to a full light. Never plant roses under large trees or where the ground is taken up by the roots of adjacent trees. You can never expect to get good results unless the ground is kept free from grass and weeds and thoroughly cultivated. A mulching of straw, leaf mold, leaves, or thoroughly rotted cow manure is beneficial. During the growing season it is advisable to fertilize roses from time to time, using bone meal, well-rotted cow manure or liquid manure, apply at intervals of a month or six weeks. So soon as the fertilizer is applied it should be worked into the soil.

Never use a spade in rose bed, but use a digging fork, as this is less likely to cause injury to the roots. After the beds have been cultivated, rake the surface smooth and even. Frequent stirring of the surface is beneficial. A top dressing of hardwood ashes is excellent.

Planting.—We cannot emphasize too greatly the necessity of pruning all roses before transplanting. All weak growth should be cut out, leaving only the stoutest and most vigorous shoots, and these must be cut back to within 3 to 6 inches of the ground. Of course, the length to which these branches are to be cut back depends upon the vigor of the plant. The hole in which the plants are to be set must be of ample size. Place the plant in the hole about 1 inch deeper than it stood in the nursery row, provided it is on its own roots. Budded roses should have the budded portion set 2 to 3 inches below the level. Fill the hole half-full of soil, pour in water, let this settle, put in some more earth, firm this well about the roots, then fill in the hole and firm when the job is completed.

Water the plants whenever needed, and keep the soil well cultivated.

Pruning.—This should not be done too early in the winter in this section. We have found from experience that if roses are trimmed before January 1st, they sometimes, during warm winters, start an early growth, and consequently the plants are killed by the heavy frosts in February. About two thirds of the past year's growth should be cut off, and all of the small, weak shoots and all decayed wood cut out. When pruning cut close to an eye or to the main stem of the plant. Do not leave ragged or jagged stems, as these decay and injure the plants. The more vigorous the variety the less it should be pruned. Climbing roses should have only their side branches shortened in. Do not disturb the main stem.

Note.—The pruning directions in the above paragraph refer to roses which have been planted more than a year.

We frequently receive complaints from our patrons who order late in the spring. They state that the flowers produced are inferior and do not come up to description. It should be understood that perfect flowers cannot be had when the plants are set out late in February or March, and which produce blooms before they are well established. But if these plants are allowed to grow until the following fall and receive the proper treatment as to pruning, fertilization and cultivation, there will be no cause for complaint.

Note.—The letter following each Rose denotes the class to which it belongs. (T.) Tea. (H. T.) Hybrid Tea. (C.) China, (H. P.) Hybrid Perpetual, (N.) Noisette, (P.) Polyantha, (R.) Rugosa, (W.) Wichuraiana, (B.) Bourbon.

New and Scarce Roses

- PRICES: Each 10 One year, strong, field grown......\$0.50 \$4.00
- Climbing American Beauty. (H. P.) Crimson flower 3 to 4 inches in diameter; well formed, fragrant, strong grower, holds foliage late; blooms in May and June and occasionally during the summer.
- British Queen. (H. T.) A new English rose. Awarded gold medal at the National Rose Association of England. Before expanding the bud is slightly tinted pink, but pure white when fully developed; free flowering; very fragrant.
- Dora. (B.) Large bloom, of a beautiful peach blossom pink, center deeper, changing to blush as the buds open; very free flowering.
- Geo. Elger. (P.) A beautiful little golden-yellow Polyantha, and like all of this class is a very free bloomer. The dainty little pointed yellow buds open into little symmetrical roses. Excellent.
- Herzogin Marie Antionette. (H. T.) Buds very long; pure orange; flowers very large and of perfect form. A fine yellow rose.
- Hoosier Beauty. (H. T.) Bright, crimson scarlet shaded darker; long bud, fine texture, stiff stem; exceedingly fragrant. A splendid rose.
- Hugo Roller. (T.) Large; full; rich lemon-yellow, petals edged and suffused with crimson; very free bloomer;
- Jonkeer J. L. Mock. (H. T.) A very strong grower and free bloomer; blooms clear imperial pink; of per-

- fect form and very fragrant. Magnificent bedding variety.
- La Tosca. (T.) Pink, tinted flesh. Flowers large, very double. Vigorous grower, free bloomer.
- Lady Hillingdon. (T.) Apricot yellow; beautiful bud; strong and vigorous grower; free bloomer; excellent.
- Lady Roberts. (T.) Rich apricot, base of petals coppery. vigorous free bloomer.
- Lady Pirrie. (H. T.) Buff, tinted salmon. Extremely vigorous grower and free bloomer.
- Leslie Holland. (H. T.) Dark scarlet crimson shaded velvety crimson; large flowers; a free and profuse bloomer; highly scented; a superior variety.
- Lyon. (H. T.) Buds long, tipped coral-red and chrome yellow at base; when buds are fully opened the color is salmon pink shaded chrome in center; very desirable.
- Marie de LeSalle. (H. T.) Very free bloomer; buds long, opening into flowers of fine form; petals large; color bright cerise, reverse of petals carmine; very double.
- Mme. Meleine Soupert. (T.) Yellow, center deeper, edged and shaded apricot. Buds long.
- Melle Blanche Martignat. (T.) Beautiful peach pink tinted yellow and crimson; free bloomer; fine foliage; bud long and pointed.
- Mme. Segond Webber. (T.) Bud is long and of rosysalmon or flesh-color, and color deepens as the bloom expands; a most desirable variety.
- Mrs. Foley Hobbs. (T.) Petals thick and of immense size; large blooms; white faintly tinted pink on edge of petals; very fragrant.

Nerissa. (H. T.) White center tinted peach; very large, fine shape; free bloomer; excellent.

Flesh, orange center. Beautiful buds, openland double. Very free bloomer. A magnifiing full and double. cent rose.

President Taft. (T.) A beautiful shade of deep, shining pink; blooms very large and of fine form; very fragrant. This Rsoe is in a class by itself.

Rayon d Or. (H. T.) Buff turning to yellow as the bloom expands. Flowers large, of fine form. A

bloom expands. Flowers large, of fine form. A superb variety.

Robin Hood. (H. T.) Flowers large, full, very double;

rosy scarlet; fine foliage; free bloomer and a vigorous

grower. Mascarand. (H. T.) Deep orange-yellow. lighter at edge of petals; flowers large and full; a good grower and a free bloomer.

Sunburst.

Sunburst. (T.) This beautiful Rose has been tested undurst. (T.) This beautiful mose has been tested for three years, and it easily stands at the head of all sorts of its color. The color is a most pleasing shade of yellow and orange; buds long and pointed; plant vigorous and healthy; blooms keep for a long time after being cut. A grand Rose.

time after being cut. A grand Rose.

Yvonne Vacherot. (H. T.) Light pink, reverse of petals deeper. Long pointed buds; large blooms. Vigorous grower, profuse bloomer.

Note—In addition to the above new roses we can supply a few plants each of other desirable new varieties. Some of the roses above enumerated can only be supplied budded on Manetti Stock. The prices as above quoted apply to plants on own roots or budded.

- Catherine Zeimet. (P.) (Double White Baby Rambler).

 This is a very profuse and perpetual bloomer; the buds are pure white, about one to one and one-fourth inches in diameter; plant grows to a height of about twenty inches; compact habit; excellent for a dwarf hedge. Price \$15.00 per 100.
- (H. P.) Flesh, shaded with rosy-pink; large bud; of fine form.
- Clothilde Soupert. (P.) Flowers 1½ inches in diameter, beautifully formed; white, with rose or light carmine center; a constant bloomer; a desirable variety for cemeteries.
- Col. B. S. Williamson. (T.) Satiny-white with deep flesh center; flowers very full, of perfect form, with high pointed center. A fine rose.
- Crimson Queen. (T.) Flowers large and full; bright, velvety crimson; strong, upright grower; good bloomer.
- Dean Hole. (H. T.) Deep salmon-pink; buds very long; a very fine, vigorous and free-blooming variety.
- Duchesse de Brabant. (Comtesse de Labarthe). Pink shaded to carmine; a favorite and a hardy old variety
- Etoile de France. (T.) A very vigorous grower. Flowers very large, full, cupped; dark, velvety crimson center vivid cerise. A fine new variety.
- Etoile de Lyon. (T.) Golden yellow; ve orous; a free bloomer; very fragrant. (T.) Golden yellow; very double, vig-
- Frau Karl Druschki. (H. P.) This is deservedly one of the most popular roses grown; flowers pure white; perfect in form; very free bloomer, strong grower. perfectly hardy everywhere. By some is called the White American Beauty; a truly magnificent rose.
- F. R. Patzer. (H. T.) Beautiful and free-blooming; robust, of erect growth; profuse bloomer; flowers creamy-buff, back of petals pink, as the bud opens it changes to light pink; very fragrant.
- Freiherr Von Marschall. (T.) A double form of Papa Gontier. Flowers large and full; color dark carmine-red; buds long; a very free and vigorous grower; foliage very beautiful and distinct.
- Gen. Jacqueminot. (H. P.) Brilliant crimson, fragrant; a favorite old variety,
- Gen. McArthur. (H. T.) Dark, velvety scarlet; large free bloomer; fragrant.
- Gloire Lyonnaise. (H. P.) Flowers very large, full; white, with base of petals very light canary-yellow; vigorous grower.
- Gruss an Teplitz. (H. T.) free bloomer. Very good. (H. T.) Bright crimson; very full;
- Helen Gould. (Balduin). (H. T.) Rosy pink; long. pointed buds. Fine.
- John Hopper. (H. P.) Bright rose, with carmine center; cupped; well formed.
- (H, T.) Creamy white; Kaiserin Augusta Victoria. double; buds large and pointed. Best white Hybrid Tea grown.
- Killarney Marney. A favorite rose, of brilliant silvery-pink; beautiful in bud; flowers large; free bloomer and strong grower.
- La France. (H. T.) One of the best-known Roses. Silvery peach; excellent; weak grower.

- Maman Cochet. (T.) Deep rose-pink; inner side of petals silvery rose; very double. Extra strong grower; fine bloomer. The finest Rose by far that has been introduced for a long time.
- Margaret Dickson. (H. P.) A fine Rose; vigorous grower; flowers white, tinted pink near center.
- Marie Pavie. (P.) Pale rose, changing to white; most valuable for low hedges; a most profuse blooming Polyantha; blooms continuous from early spring until frost. Price \$15.00 per 100.
- Marie Van Houtte. (T.) Pale yellow, edged rose. Very fine.
- Marshall P. Wilder. (H. P.) Cherry carmine; free bloomer, very fine.
- Meteor. (H. T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.
- Mme. Camille. (T.) Rosy salmon; very large; free
- Mme. Caroline Testout. (H. T.) A magnificent Hybrid Tea, of the very loveliest shade of pink.
- Mme. Eugene Marlatte. (T.) Brilliant red; strong grower; perpetual bloomer.
- Mme. Francisca Kruger. (T.) Large, double, copperyyellow shading to peach; of strong and vigorous growth.
- Mme. Helene Gambier. (H. T.) Rosy-salmon with deeper shading; very double and full; an excellent variety
- Mme. Jules Grolez. (H. T.) Satiny-rose color; flowers large, very double; a profuse and free bloomer.
- Mme. Lambard. (T.) Bright red; large, full and fragrant.
- Mme. Plantier. (H. N.) Bears thousands of pure white, medium-sized flowers. Profuse bloomer in early spring only. Desirable for massing, and as hardy Price \$15.00 per 100.
- Orleans. (P.) Deep cerise with a distinct white center. A showy and dainty variety of the dwarf Polyantha; superior to Baby Rambler; blooms from early spring until frost; flowers produced in large heads; very dwarf grower; makes an excellent hedge. This, when combined with Catherine Zeimet, in the background, makes a very pleasing effect. Price \$15.00 per 100.
- Papa Gontier. (T.) Brilliant carmine, tinted rose; finely formed buds.
- Prince Camille de Rohan. (H. P.) Deep, rich, velvety crimson, passing to intense maroon, shading to black. At a short distance the flowers appear really black. One of the handsomest roses, and is worthy of a place in every garden.
- Paul Neyron. (H. P.) The flowers are immense; probably the largest Rose. Bright, shining pink, clear and beautiful; double and full; finely scented; blooms all summer.
- Radiance. (T.) Bud large. Brilliant rosy carmine. The opening flowers show a beautiful tint of opal pink. Continuous bloomer, very fragrant.
- Richmond. (T.) Scarlet. A very free and continuous bloomer; buds long; color rich scarlet.
- Rhea Reid. (H. T.) One of the best Roses of recent introduction. A cross of American Beauty with a red seedling. A vigorous and rapid grower. As large as American Beauty; very double and fragrant; continuous bloomer. Beautiful shade of red.
- Rugosa rubra. (R.) A popular variety for planting in masses or for hedges. Large single crimson flowers, followed by glossy red berries.
- Souv. de La Malmaison. (B.) Large, very full; flesh colored. A very free bloomer; an old favorite.
- Souv. Pres. Carnot. (T.) Delicate rosy-flesh shading deeper to center. A beautiful rose.

 Ulrich Brunner. (H. P.) Cherry red; very large; fine
- bloomer, extra good form.
- Wellesley. (T.) Beautiful pink; the reverse side of the petals silvery.
- White Maman Cochet. (T.) Pure white, sometimes tinged blush. A superb Rose.
- Wm. Shean. (H. T.) Strong grower, throwing up long, stiff canes, crowned with large, pointed flowers of a Killarney-pink. Fine form; free and perpetual bloomer. A grand Rose.

Wm. R. Smith. (H. T.) A variety combining the good qualities of K. A. Victoria and Maman Cochet. A very free blooming and upright and vigorous grower; flowers creamy-white with shadings of pink.

Climbing Roses on Own Roots

- - the varieties listed below.... .50 3.50 30.00
- Banksia, White. The flowers of this very desirable Rose are pure white, violet-scented, very small, double and borne in umbels of twelve to fifteen blossoms. Spring bloomer.
- Banksia, Yellow. Identical with White Banksia in all particulars except the color, which is a clear, sulphur yellow; spring bloomer.
- Cherokee. (Rosa laevigata). The well-known Cherokee of the South, where it has become naturalized; it is, however, a native of China. A vigorous and rampant climber. Large, single white, fragrant flowers produced in early spring in great profusion; evergreen; foliage bright, glossy green; most desirable for pergolas and trellises. Will climb to the top of the loftiest tree.
- the loftiest tree.

 Clothilde Soupert, Climbing, (P.) This variety originated in our nurseries. We have cultivated it for years and can recommend it with the utmost confidence. In color and form it is similar to its parent, the well-known Clothilde Soupert, but flowers are larger. A constant bloomer after the first year, as it flowers best on old wood. Vigorous grower, and has resisted a cold of 20 degrees below zero. This is a great addition to our list of Climbing Roses, and is becoming one of the favorites.
- Dorothy Perkins. (H. W.) This grand rose is a Hybrid Wichuriana. It is a vigorous and rampant climber. The foliage is of a deep green, leathery texture, and remains on the plant nearly all winter. The flowers are from 1 to 1½ inches in diameter, borne in clusters of from 10 to 30, and very double, of a beautiful shell-pink. Remains in bloom for several weeks. A most desirable Climbing Rose. Most effective for planting on terraces and slopes.

- Evergreen, or Double Cherokee. This is a double form of the popular Cherokee Rose. The flowers are 2½ to 3 inches in diameter; very double, similar to the White Banksia. The plant being evergreen makes it a desirable climber. Blooms in late spring.
- Fortunes' Yellow, or Beauty of Glazenwood. (Climbing). Yellow, flaked with carmine; very good grower; spring bloomer.
- Gainsborough. Rosy-flesh; flowers large; a fine variety.
- Hiawatha. Brilliant ruby-carmine; clear white eye; very distinct; vigorous grower; almost evergreen.
- Kaiserin Augusta Victoria. (T.) (Mrs. Robt. Peary.) Creamy-white; very double; buds large and pointed; free bloomer; an excellent white climber.
- Lady Gay. A bright rose-pink; similar to Dorothy Perkins, but later, the flowers being larger and fewer to the cluster.
- Philadelphia Rambler. This variety is a cross between Crimson Rambler and the Hybrid Perpetual, Victor Hugo. Its color is deeper and brighter crimson, flowers larger and growth more erect than Crimson Rambler.
- Wichuraiana. (The Memorial Rose). Almost evergreen; flowers small, single, white; of trailing habit. Beautiful for planting on slopes and terraces, which it soon covers with a mass of bright green foliage. On account of its hardiness and glossy foliage, it is used extensively in the North for cemetery planting. The plant is a strong grower,

 Note—We can supply extra heavy, two year budded

plants of most of the roses budded on Manetti stock.

It is almost impossible to propagate some varieties of Roses upon their own roots, and unless these are grown upon Manetti, their cultivation would have to be discontinued. Others produce finer flowers when budded or grafted upon the Manetti stock. They are especially desirable for Florida and sub-tropical sections, as their roots penetrate the soil to a great depth, and the plants are thus enabled to withstand extreme heat and drought and still produce flowers.

Budded Rose.

Care of Budded Roses.—Budded Roses should be planted so that the junction of the bud and stock should be 3 inches below the level. The only objection to budded roses is that the suckers of the Manetti stock will shoot out so soon as the growth starts. The photograph of a budded rose shows the budded portion "A' and the shoots or suckers from the Manetti stock "B." The difference in the foliage is very perceptible, that of the Manetti is composed of from 7 to 9 leaflets; whereas, the Tea. Hybrid Tea, Hybrid Perpetual and Bourbon Roses usually have but 5 leaflets. So soon as the Manetti stock puts out a shoot this should be immediately cut off close to the point of exit from

the stock. If this is carefully done there will be no more trouble from the Manetti stock. Don't blame the nurseryman if you fail to carry out instructions for treating budded roses.

American Beauty. (H. P.) Deep rose; large; cupped; fragrant; dwarf grower.

Baroness de Rothschild. (H. P.) Flowers of large size; color light-pink, beautifully cupped, remarkably symmetrical; a most distinct and beautiful rose; good bloomer; flowers are borne on stout, erect stems.

Frau Karl Druschki. (H. P.) This is deservedly one of the most popular roses grown; flowers pure white; perfect in form; very free bloomer, strong grower, perfectly hardy everywhere. By some is called the White American Beauty; a truly magnificent rose.

Gl. Lyonnaise. (H. P.) Flowers very large, full; white, with base of petals very light canary yellow; vigorous grower.

La France. (H. T.) One of the best known Roses. Silvery peach; excellent; weak grower.

Mme. Caroline Testout. (H. T.) One of the best of the newer Roses. Of La France type, but clear pink; large, free bloomer. A great favorite where known.

Perle des Jardins. (T.) Bright golden-yellow; flowers large; full; double; very fragrant; a vigorous climber; best of its color.

Captain Christy. (H. T.) Blush, rosy center; large and full; very free bloomer.

Devoniensis, Climbing. (T.) An old favorite; creamywhite, flesh center; very fragrant; spring bloomer.

Kaiserin Augusta Victoria. (T.) (Mrs. Robt. Peary.) Creamy-white; very double; buds large and pointed; free bloomer, an excellent white climber.

Marechal Niel. (T.) Deep chrome-yellow. Always deeper in color and a better grower when budded.

Meteor, Climbing. (H. T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.

Mme. Caroline Testout. A magnificent free blooming rose with flowers of satiny-pink; large and full; a beautiful climber.

Perle des Jardins. (T.) Bright yellow, very full and double. Best of its color.

Pillar of Gold. (T.) Rosy pink, base of petals yellow. Variable in color. Sometimes almost solid pink.

Variable in color. Sometimes atmost solid pink.

Pink Cherokee. This superb Rose is a pink form of the well-known Cherokee Rose. It is one of the earliest to bloom. Immense, beautiful, single pink flowers are produced in profusion. The plant blooms for a period of about two months. It is a vigorous and rampant grower; foliage is evergreen and of a bright, glossy green. This is a great acquisition to our list of Roses. Immensely popular.

Reine Marie Henriette, (T.) Bright cherry-red. Of good form and vigorous habit. The best red climber. Reve d'Or (Climbing Safrano). (T.) Chamois-yellow large; full; fragrant; free bloomer. Extra fine.

Souv, de La Malmaison. (B.) A beautiful climbing form of this well-known rose: flowers flesh colored, large and very full: rampant grower; evergreen. This variety is becoming a great favorite.

Waltham No. 3. (H. P.) Very fine spring and autumn blooming climber; dark crimson.

william-Allen Richardson. (T.) Orange-yellow; center coppery-yellow.

Farm and Garden Rule-Book. By L. H. Bailey. A Manual of Ready Rules and Reference. Cloth, ill., 12 mo., index, \$2.00. Postage extra on 2 lbs. 6 oz.

When Professor Bailey's "Horticulturist's Rule Book" was published nearly 25 years ago, the volume became a standard agricultural work running through sixteen editions. Taking this book as a basis the author has now made a wholly new book, extending it to cover the field of general farming, stock raising, dairying, poultry rearing, horticulture, gardening, forestry and the like. It is essentially a small encyclopedia of ready rules and references packed full from cover to cover of condensed meaty information of precepts on almost every leading subject connected with country life.

The Garden Book

This new book tells how best to plant, cultivate, spray, harvest and market all common vegetables. There are about 275 pages; 5x7i inches, lots of pictures, and it's bound in stiff green buckram cloth covers.

52 Weeks and this Cloth Bound Garden Book for \$1.00 A SPECIAL OFFER TO OUR CUSTOMERS AND FRIENDS

Who are not now subscribers

The five Orange Judd Weeklies are shown on the other side. Subscribers always receive the one edited for their state. Each is a farm newspaper intensely local, but also national in scope. Editorially each is supreme in its field. More than that, subscribers get real help through the service bureau free. All leading farmers take it, like it and cash in on it. As a magazine for all the family it is clean, interesting, entertaining. A year's numbers contain over 1300 pages.
